Prepared by ALEX Real Estate

Market Statistics · Closed Sales

Version 14.455

October 25, 2026 · 10:30 PM CDT

MARKET STATISTICS Every figure is measured from closed sales recorded in the ABOR MLS; the county index on the first chart is the only modeled element. Figures are medians, so one unusual house cannot move a line, and prices are net of what the seller paid toward the buyer's costs.

SALES, OCT 2025 TO SEP 2026	MEDIAN NET SALE PRICE	MEDIAN NET PRICE PER SF	MEDIAN DAYS ON MARKET
8,786	$600,000	$289	38 days
single-family homes · Austin	average $814,841	average $335	average 72 days

NET SALE PRICE

Prices are net sale prices.

Net sale price = Closing price − Buyer closing costs paid by Seller − Repairs paid by Seller at Buyer request

Prices per square foot are the net sale price divided by the living area. The two measures that compare a sale with its first asking price use the recorded closing price, because the asking price is a gross figure too.

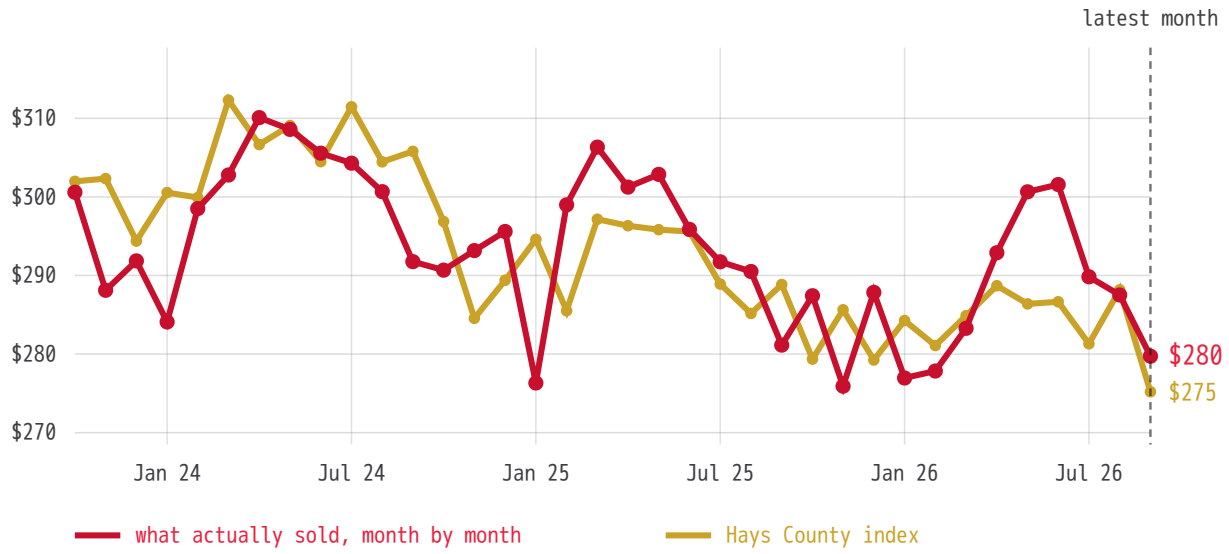
HOW THIS AREA IS MEASURED

Austin recorded 24,920 closed sales over the period, a median of 715 per month. That is enough for a monthly series, so these charts are monthly and each month is set against the same month a year earlier.

1. WHERE THIS MARKET HAS BEEN GOING

Austin · single-family homes · median net price per square foot



The gold line is the Hays County index ALEX uses to bring every comparable sale to today. Over the twelve months to September 2026 it moved −4.7%.

NOW Jul–Sep 2026: $286 a square foot, against $288 a square foot in Jul–Sep 2025 — about the same as a year earlier.

There are currently 3,096 single-family homes for sale in Austin, against a recent selling rate of about 732 a month. At that rate it would take 4.2 months to sell every home now on the market.

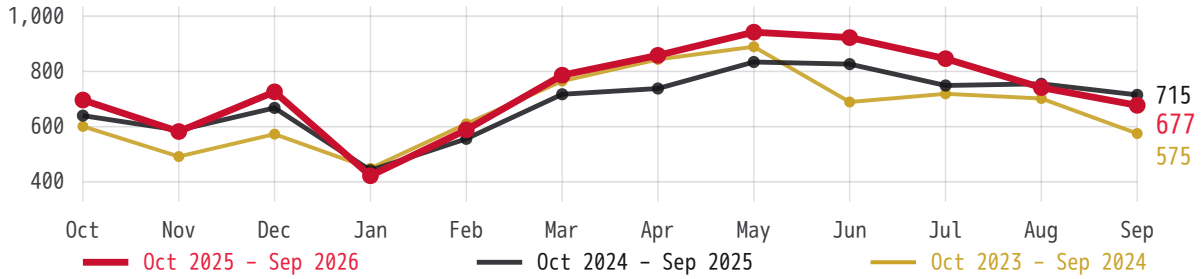
TEN MEASURES

Austin · single-family homes · through September 2026 · prices are net sale prices

2. Sales closed

How many homes sold in each period

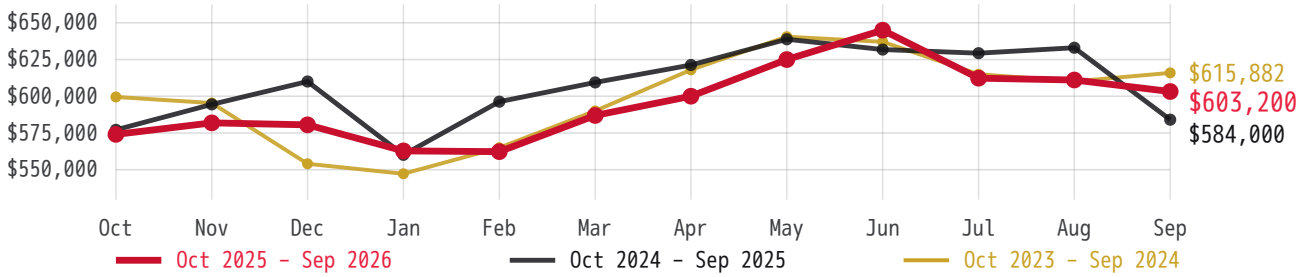


The number of homes that changed hands. When this falls, every other measure on this page rests on fewer sales and varies more from period to period.

NOW Jul–Sep 2026: 2,264 sales, against 2,219 sales in Jul–Sep 2025 — about the same as a year earlier.

3. Median net sale price

The median sale price, after what the seller paid toward the buyer's costs



Half the homes sold for more than this and half for less. It is the net figure, what the seller kept, so it already accounts for money the seller paid toward the buyer's costs at closing.

NOW Jul–Sep 2026: $608,818, against $615,433 in Jul–Sep 2025 — about the same as a year earlier.

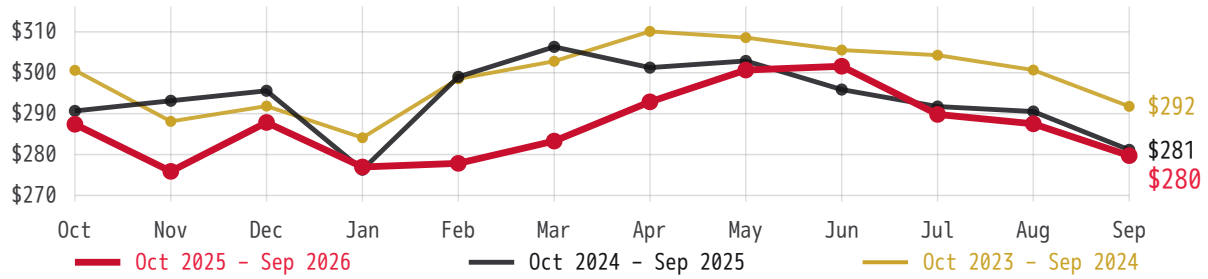
4. Median net price per square foot

The same net price, divided by living area

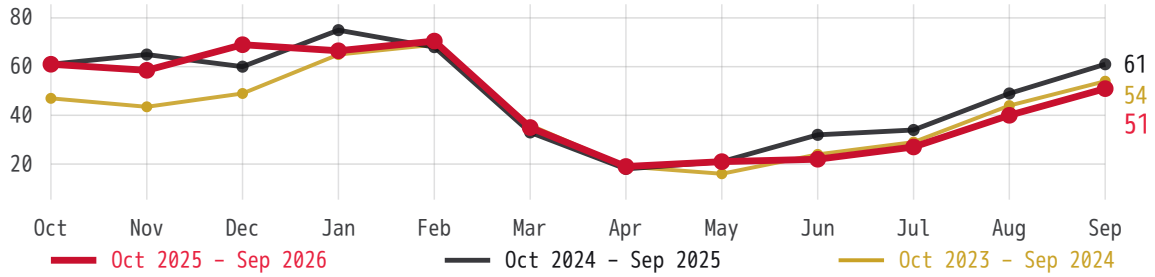


Price per square foot lets a large house and a small one be compared on the same scale. It is the measure the valuation is built on.

> NOW Jul–Sep 2026: $286 a square foot, against $288 a square foot in Jul–Sep 2025 — about the same as a year earlier.

5. Median days on market

How long the median sale took to find its buyer



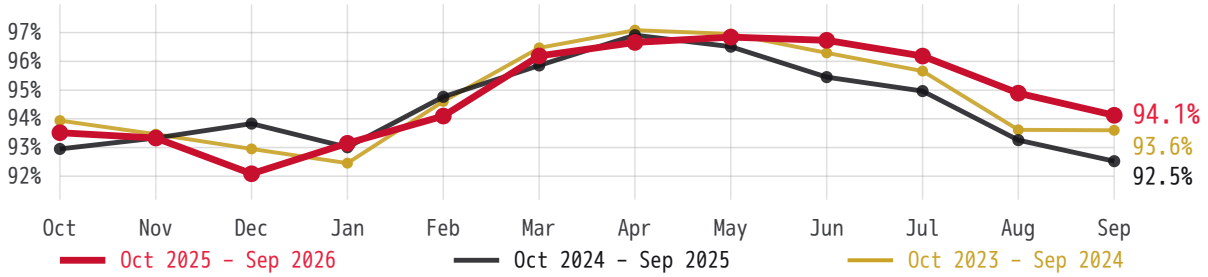
Counted, wherever the MLS record allows, from the day the home first went on the market rather than from its latest price change. Half of the sales took longer than this.

> NOW Jul–Sep 2026: 39 days, against 48 days in Jul–Sep 2025 — homes are selling faster.

© 2026 Alexander Tiffany Southwest, LLC

6. Sale price as a share of the first asking price

The median closing price as a percentage of the original asking price

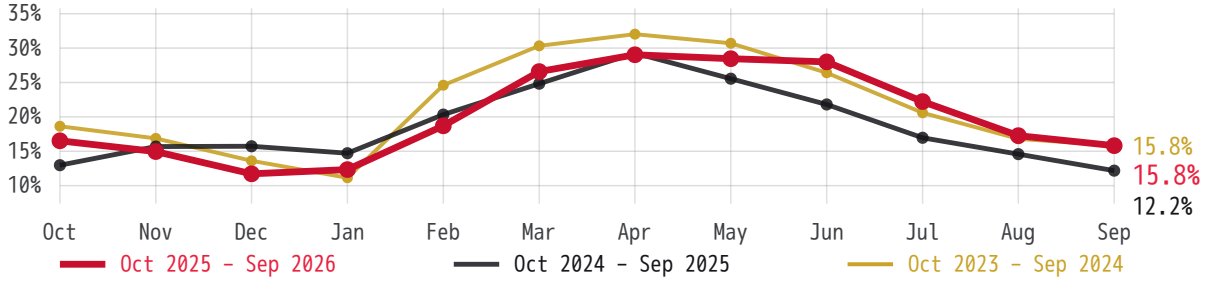


One hundred percent means the home sold for exactly its first asking price. Ninety percent means the seller accepted ten percent less than that price.

> NOW Jul–Sep 2026: 95.1%, against 93.6% in Jul–Sep 2025 — sellers are keeping more of their first asking price.

7. Share selling at or above the original asking price

How often the seller received the full first asking price or more



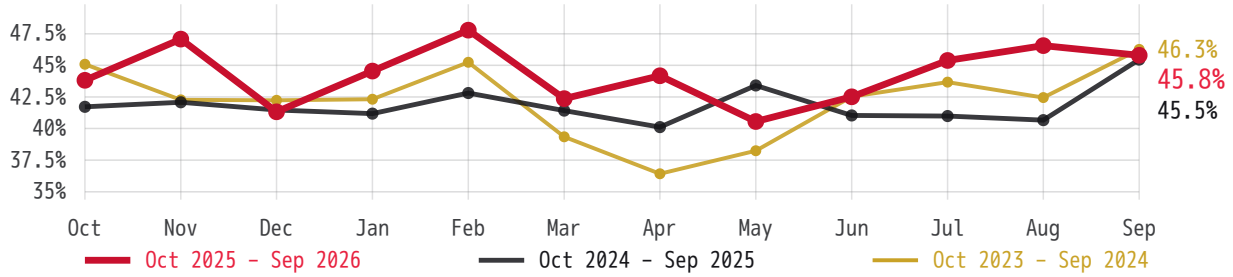
The percentage of sales that closed at or above their first asking price. It is the clearest single sign of whether buyers or sellers have the advantage.

> NOW Jul–Sep 2026: 18.4%, against 14.6% in Jul–Sep 2025 — more sellers are getting their full asking price.

© 2026 Alexander Tiffany Southwest, LLC

8. % Seller Concession

How often the seller gave a discount at closing instead of a lower price

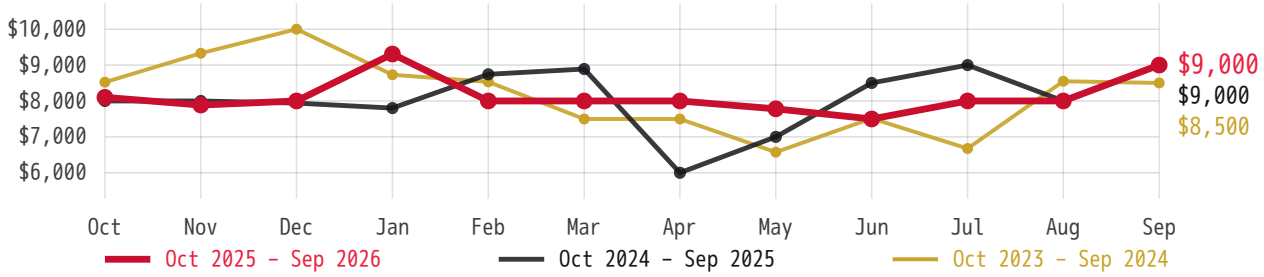


When a seller pays part of the buyer's closing costs, that discount does not show up in the recorded sale price. It is common here, so a gross sale price can overstate what comparable sellers actually received.

> NOW Jul–Sep 2026: 45.9%, against 42.4% in Jul–Sep 2025 — more sellers are paying toward buyers' costs.

9. $ Seller Concession

How much the seller paid, in the sales where the seller paid anything



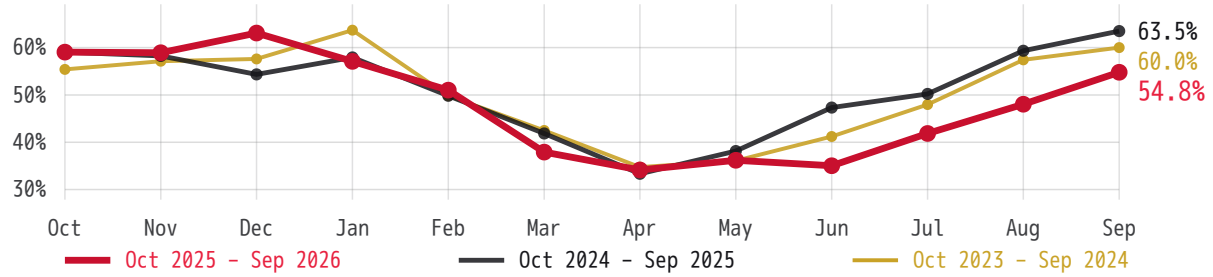
Among only the sales that included one, this is the middle amount the seller paid toward the buyer's costs.

> NOW Jul–Sep 2026: $8,333, against $8,667 in Jul–Sep 2025 — those payments are smaller than a year ago.

© 2026 Alexander Tiffany Southwest, LLC

10. Share that cut the price before selling

How often the asking price was lowered before the sale

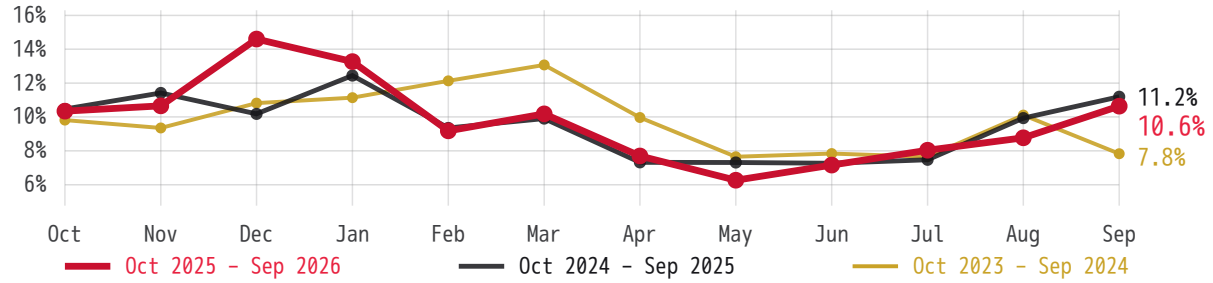


The percentage of sold homes whose final asking price was below their first asking price, meaning the price was reduced at least once before the sale.

> NOW Jul–Sep 2026: 48.2%, against 57.7% in Jul–Sep 2025 — fewer sellers are having to cut their price.

11. Share that were newly built

How much of what sold came from a builder



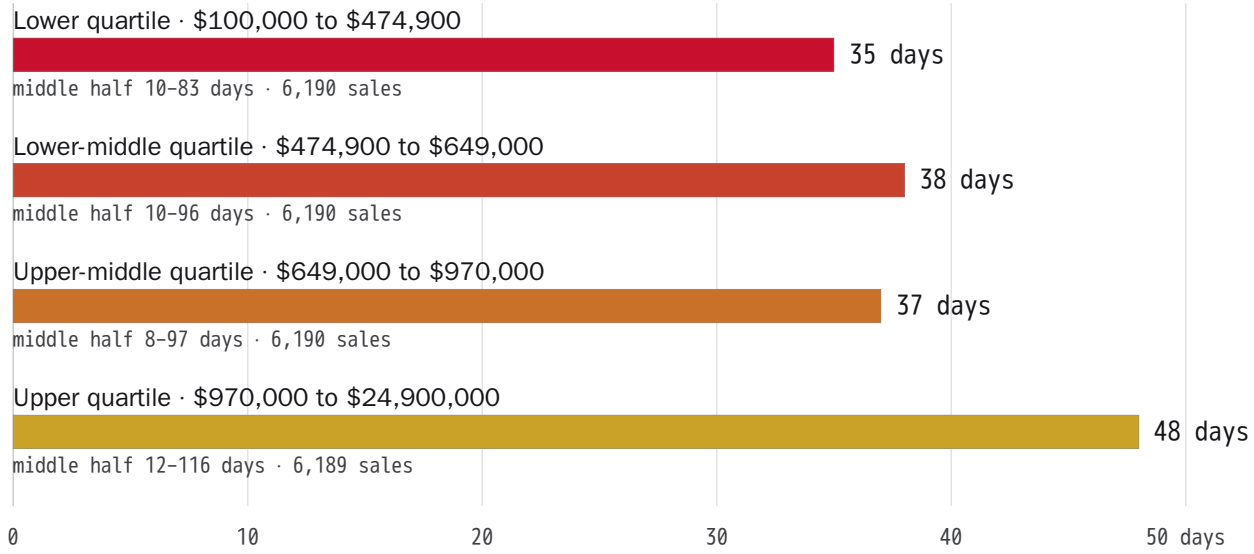
Builders often compete with incentives and interest-rate buydowns rather than price cuts, and they have no home of their own to move out of. The larger their share of sales, the more a resale seller competes on their terms.

> NOW Jul–Sep 2026: 9.1%, against 9.5% in Jul–Sep 2025 — about the same as a year earlier.

© 2026 Alexander Tiffany Southwest, LLC

12. How long sales take, by price quartile

Every sale from October 2023 to September 2026, ranked by its first asking price and split into four groups of equal size



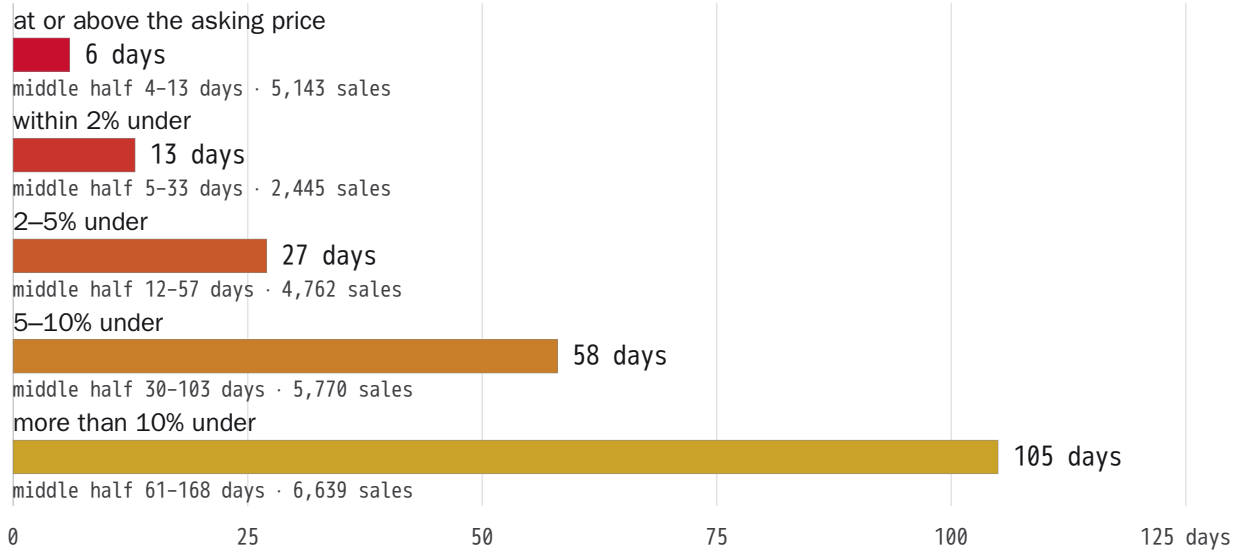
A quartile is one quarter of the sales: the lower quartile is the cheapest quarter by first asking price, the upper quartile the dearest. Each bar is the median number of days those homes took to sell; the line under it gives the middle half of that group, so the spread is shown with the median. The upper quartile's median is 13 days longer than the lower quartile's. Where that gap is small next to the spread inside each group, price explains little of how long a sale takes.

> NOW Oct 2025–Sep 2026: the lower quartile (up to $450,000) took a median of 41 days and the upper quartile ($975,000 and up) 40 days — price makes little difference to how long a sale takes.

© 2026 Alexander Tiffany Southwest, LLC

13. How long sales take, by how much was given up

The same sales, October 2023 to September 2026, grouped by how far under the first asking price they closed



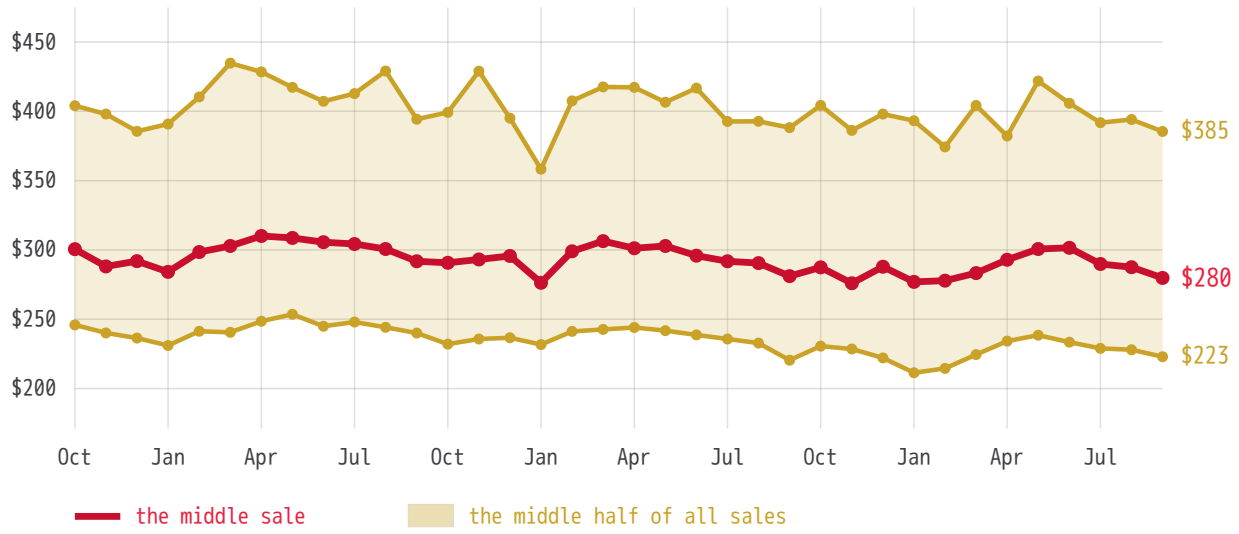
A home that stays unsold is usually reduced in price, so time on the market and the discount from the first asking price tend to rise together. This chart describes how past sales behaved at each level of discount; it does not predict how long any particular home will take.

> NOW Oct 2025–Sep 2026: homes that sold at or above their first asking price took a median of 6 days; those that closed more than 10% under it took 112 days — the more a seller gave up, the longer the sale took.

© 2026 Alexander Tiffany Southwest, LLC

14. The middle half of net prices per square foot

How consistently this market prices homes: the range around each median above



A quarter of sales landed below the lower line and a quarter above the upper one. When these lines sit close together, homes here price predictably and a valuation can be held to a tight range. When they spread apart, the middle figure means less and the range around it matters more.

> NOW Jul–Sep 2026: the middle half spanned $164 a square foot, against $162 a square foot in Jul–Sep 2025 — about the same as a year earlier.
