MARKET STATISTICS Every figure is measured from closed sales recorded in the ABOR MLS; the county index on the first chart is the only modeled element. Figures are medians, so one unusual house cannot move a line, and prices are net of what the seller paid toward the buyer's costs.

NET SALE PRICE

Prices are net sale prices.

Net sale price = Closing price − Buyer closing costs paid by Seller − Repairs paid by Seller at Buyer request

Prices per square foot are the net sale price divided by the living area. The two measures that compare a sale with its first asking price use the recorded closing price, because the asking price is a gross figure too.

HOW THIS AREA IS MEASURED

Buchanan Lake Village recorded 52 closed sales over the period, a median of 5 per year. That is too few to support a monthly series. A monthly median drawn from one or two sales is not a reliable statistic: it can swing widely when one unusual house sells, and would show a trend that is really sampling noise. These charts are therefore annual, the finest interval this area can support, and they run from 2016 to 2026. For a month-by-month view of the market this property sits in, choose a wider area above. 11 of the 11 periods shown carry fewer than 10 sales and are drawn hollow; read those as indicative rather than measured.

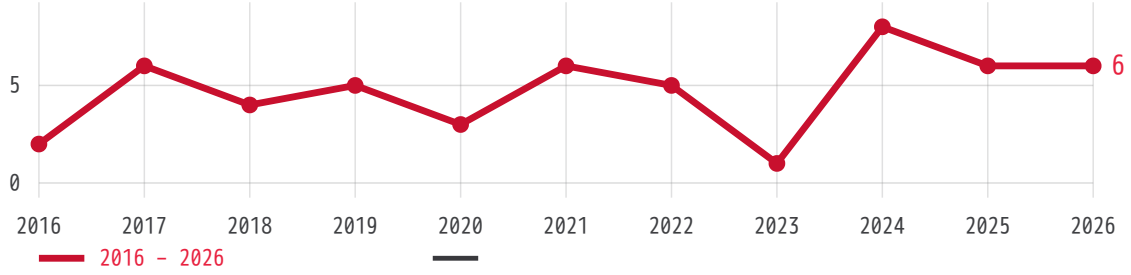

There are currently 8 single-family homes for sale in Buchanan Lake Village, against a recent selling rate of about 5 a year. At that rate it would take 1.7 years to sell every home now on the market.

NINE MEASURES

Buchanan Lake Village · single-family homes · through October 2026 · prices are net sale prices

1. Sales closed

How many homes sold in each period

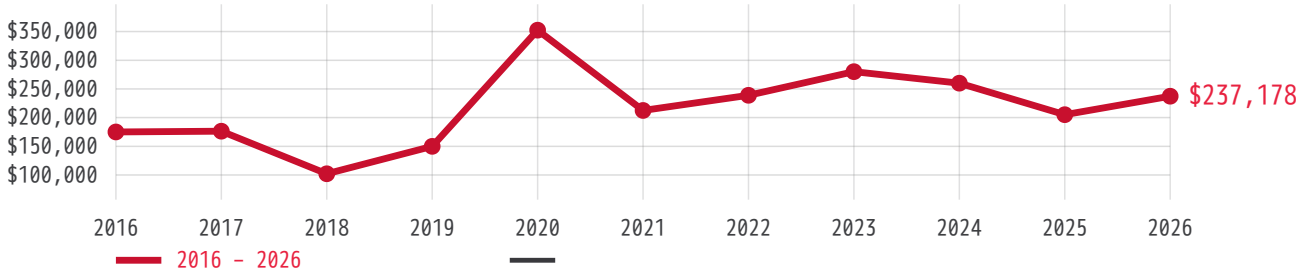

The number of homes that changed hands. When this falls, every other measure on this page rests on fewer sales and varies more from period to period.

© 2026 Alexander Tiffany Southwest, LLC

2. Median net sale price

The median sale price, after what the seller paid toward the buyer's costs

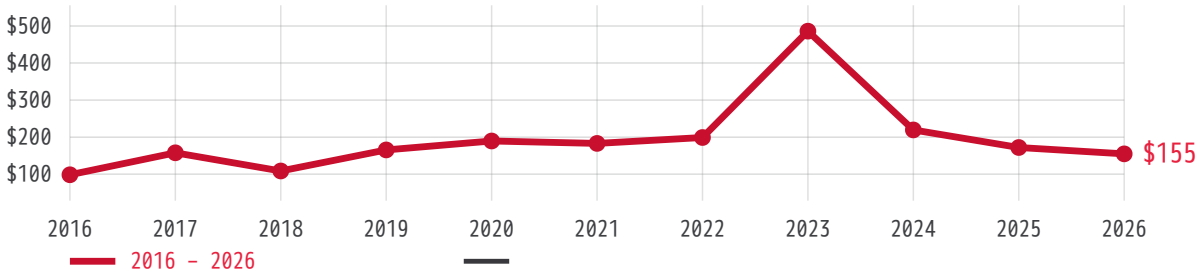

Half the homes sold for more than this and half for less. It is the net figure, what the seller kept, so it already accounts for money the seller paid toward the buyer's costs at closing.

> NOW 2026 so far: $237,178, against $205,000 in 2025 — prices are higher than a year ago.

3. Median net price per square foot

The same net price, divided by living area

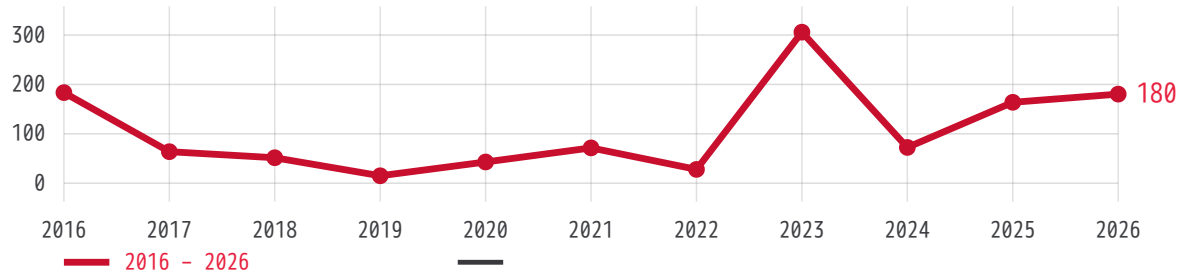

Price per square foot lets a large house and a small one be compared on the same scale. It is the measure the valuation is built on.

> NOW 2026 so far: $155 a square foot, against $172 a square foot in 2025 — prices are lower than a year ago.

4. Median days on market

How long the median sale took to find its buyer

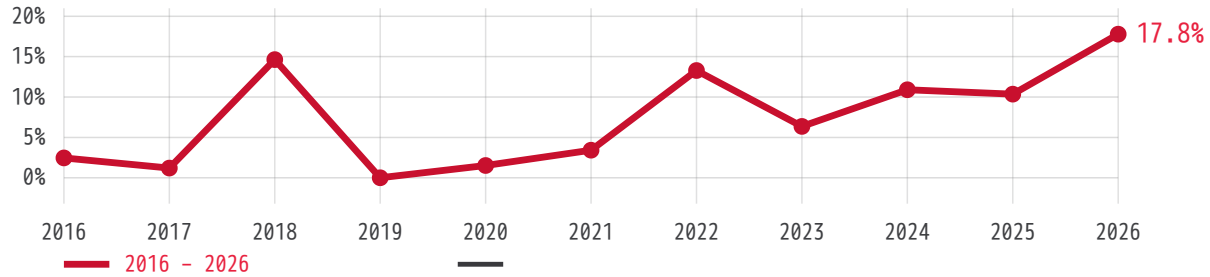

Counted, wherever the MLS record allows, from the day the home first went on the market rather than from its latest price change. Half of the sales took longer than this.

> NOW 2026 so far: 180 days, against 164 days in 2025 — homes are taking longer to sell.

5. % Discount from the first asking price

The median amount the closing price fell below the original asking price, as a percentage

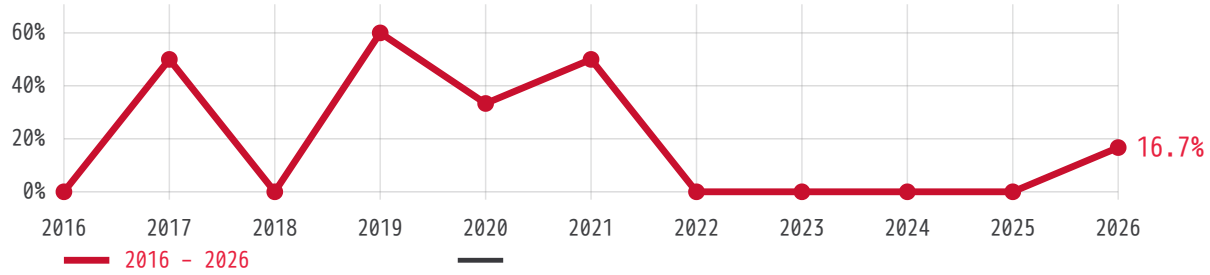

Zero percent means the home sold for exactly its first asking price. Ten percent means the seller accepted ten percent less than that price.

> NOW 2026 so far: 17.8%, against 10.4% in 2025 — sellers are giving up more of their first asking price.

© 2026 Alexander Tiffany Southwest, LLC

6. Share selling at or above the original asking price

How often the seller received the full first asking price or more

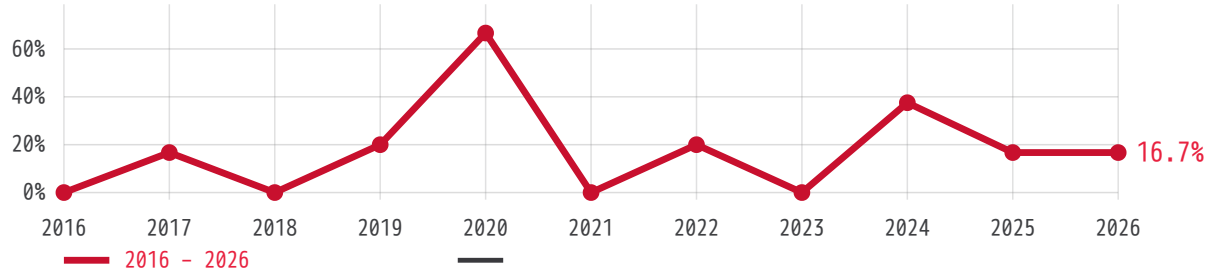

The percentage of sales that closed at or above their first asking price. It is the clearest single sign of whether buyers or sellers have the advantage.

> NOW 2026 so far: 16.7%, against 0.0% in 2025 — more sellers are getting their full asking price.

7. % Seller Concession

How often the seller gave a discount at closing instead of a lower price

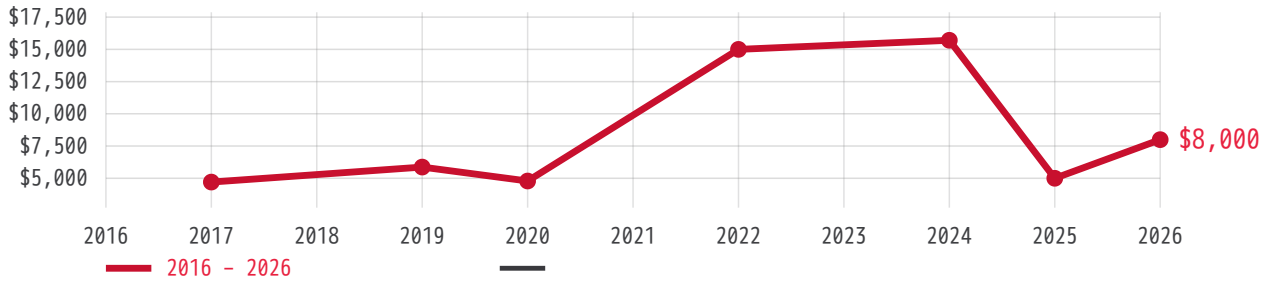

When a seller pays part of the buyer's closing costs, that discount does not show up in the recorded sale price. It is common here, so a gross sale price can overstate what comparable sellers actually received.

> NOW 2026 so far: 16.7%, against 16.7% in 2025 — about the same as a year earlier.

8. $ Seller Concession

How much the seller paid, in the sales where the seller paid anything

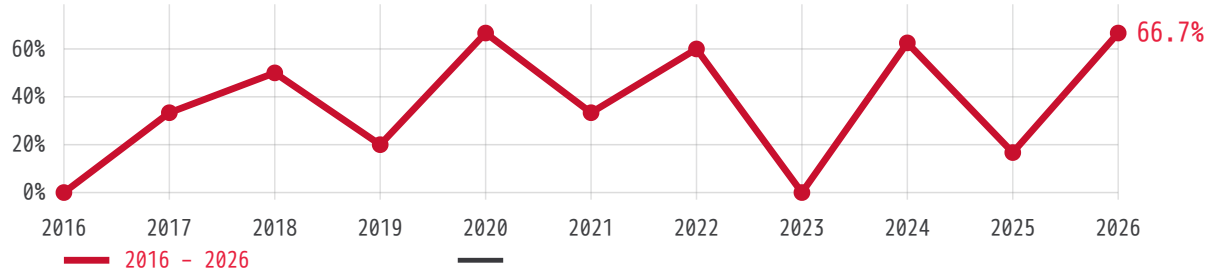

Among only the sales that included one, this is the middle amount the seller paid toward the buyer's costs.

> NOW 2026 so far: $8,000, against $5,000 in 2025 — those payments are larger than a year ago.

9. Share that cut the price before selling

How often the asking price was lowered before the sale

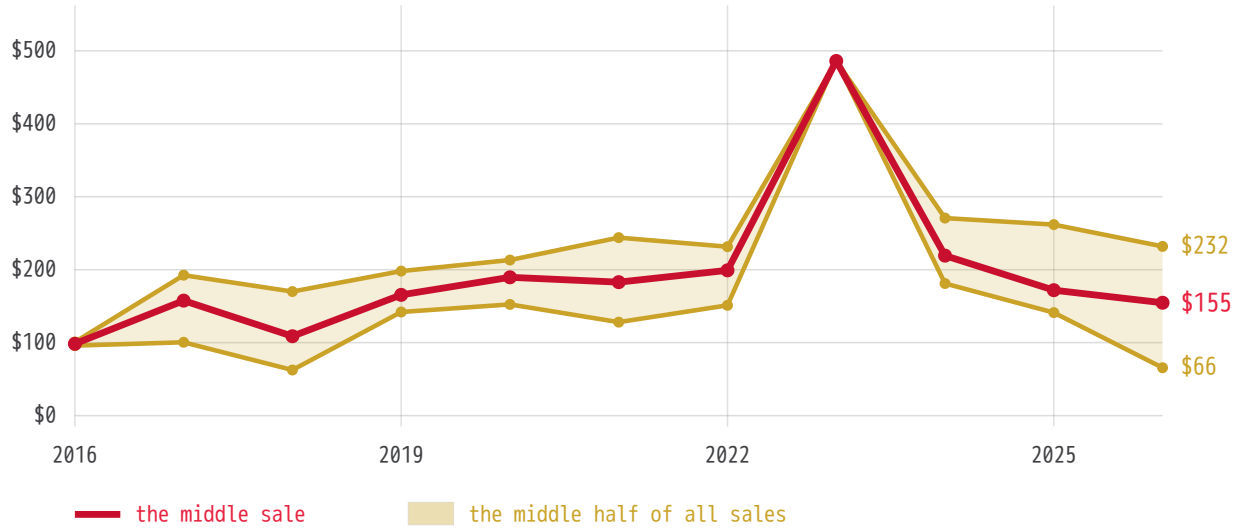

The percentage of sold homes whose final asking price was below their first asking price, meaning the price was reduced at least once before the sale.

> NOW 2026 so far: 66.7%, against 16.7% in 2025 — more sellers are having to cut their price.

© 2026 Alexander Tiffany Southwest, LLC

10. The middle half of net prices per square foot

How consistently this market prices homes: the range around each median above

A quarter of sales landed below the lower line and a quarter above the upper one. When these lines sit close together, homes here price predictably and a valuation can be held to a tight range. When they spread apart, the middle figure means less and the range around it matters more.

> NOW 2026 so far: the middle half spanned $166 a square foot, against $120 a square foot in 2025 — prices are less consistent than a year ago.
