1. Summary

Resale homes · 25 sales · November 9, 2025 – November 8, 2026

This study looks at the **25 resale homes** sold in Lakeway Highlands in the **365 days** to November 8, 2026. A full year is used because only 19 resale homes sold in the last 180 days. New construction is left out and shown on its own in section 7. The homes are compared four ways: **by price**, **by living area**, **by year built** and **with or without a view**. The first three are split into four equal groups (quartiles), each named by its range.

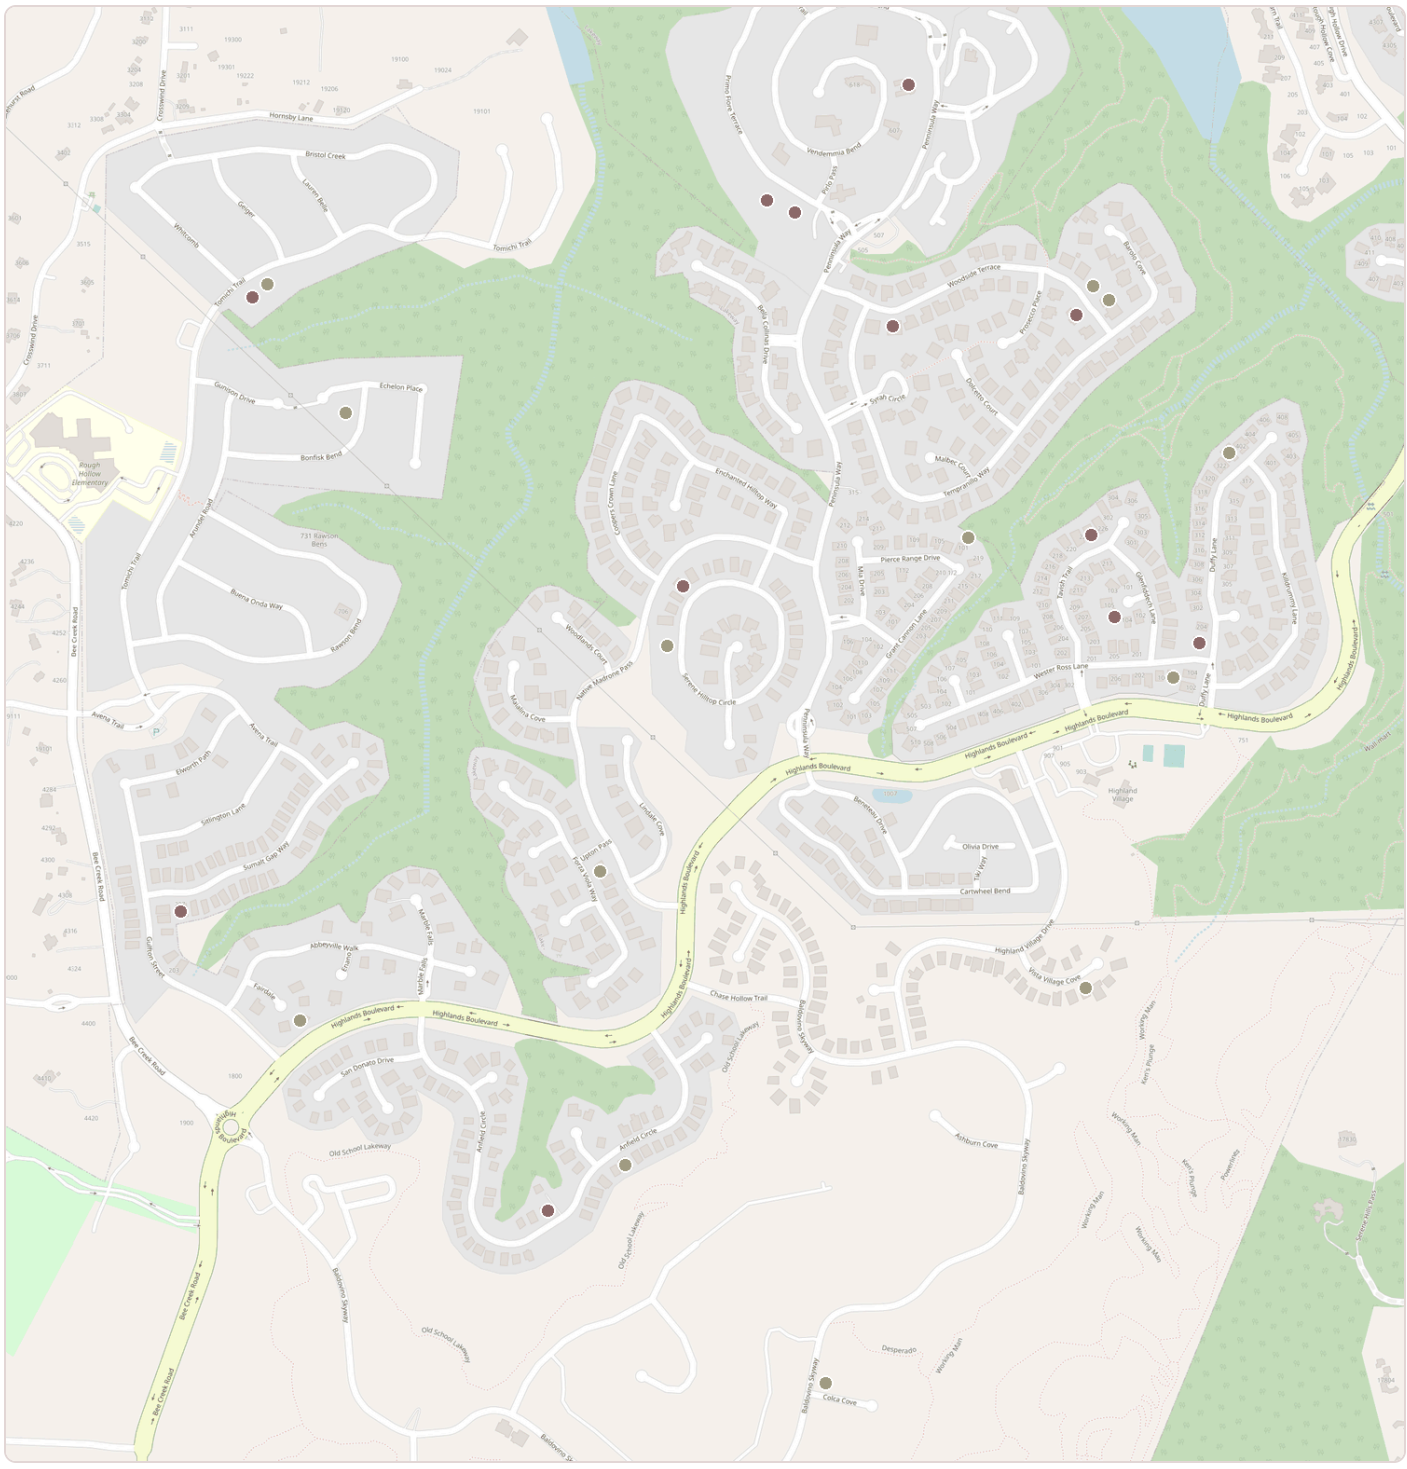

Each comparison has its own section (3–6) with everything about it in one place: the key differences, a table of every measure at a glance, the charts and the numbers.

3. Quartiles by net sale price

Resale homes · 25 sales · November 9, 2025 – November 8, 2026

Sales ranked by net sale price and cut into four equal groups. This is the usual way to read a market by price.

Sales per group

- Under $845K: 6 sales (24%)
- $845K–$965K: 6 sales (24%)
- $1.11M–$1.57M: 7 sales (28%)
- Over $1.57M: 6 sales (24%)

Bottom line

- Homes over $1.57M sell for about $186 per SF (78%) more than homes under $845K.
- Homes over $1.57M are about 2,420 SF (76%) larger than homes under $845K.

3.1 Key differences

The top group against the bottom group. Only real differences are listed. Section 8 explains each measure.

Under $845K $845K–$965K $1.11M–$1.57M Over $1.57M

Higher-priced homes Over $1.57M

- Sell for more per square foot.
- Are much larger.

Lower-priced homes Under $845K

- Sell for less per square foot.
- Are much smaller.

3.2 At a glance

Shaded rows are real differences; the darkest cell is the highest. Gray rows show no clear difference. Prices are averages; days on market and year built are medians.

	Under $845K	$845K–$965K	$1.11M–$1.57M	Over $1.57M	Real difference?
Net price per SF	$239 per SF **Lowest**	$281 per SF	$319 per SF	$426 per SF **Highest**	✓ large
Living area	3,167 SF **Smallest**	3,200 SF	4,141 SF	5,586 SF **Largest**	✓ large
Year built	2014	2016	2018	2019	unclear
Days on market	48 days	62 days	21 days	61 days	unclear
Discount from original list	4.8%	6.7%	4.4%	3.1%	unclear
Price cut before sale	67%	33%	43%	17%	unclear
Seller paid closing costs or repairs	83%	50%	57%	33%	unclear
Has a view	50%	83%	57%	83%	unclear

How to read this section. Each heading gives the finding. The gold box says whether the gap is real (✓, with its size) or could be chance (–). The section ends with its numbers; the tests are in section 8.3.

3.3 Homes over $1.57M sell for about $186 per SF (78%) more than homes under $845K

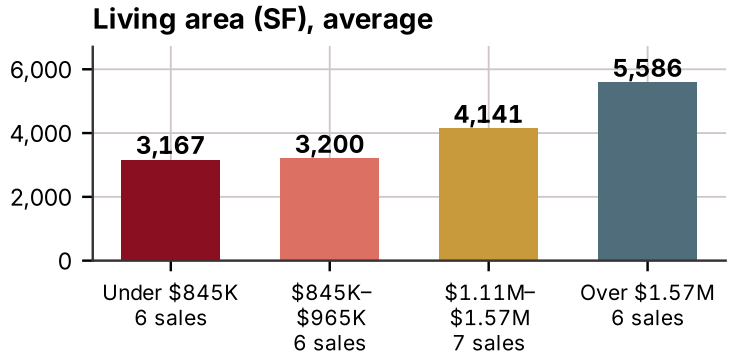

The average is **$426 per SF** for homes over $1.57M and **$239 per SF** for homes under $845K. It rises step by step from the lowest range to the highest. Defined in 8.1.2.

✓ **Real difference** · large

 © 2026 Alexander Tiffany Southwest, LLC

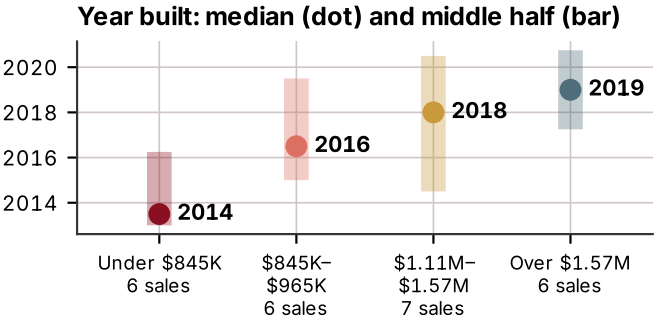

3.4 Homes over $1.57M are about 2,420 SF (76%) larger than homes under $845K

The average is **5,586 SF** for homes over $1.57M and **3,167 SF** for homes under $845K. It rises step by step from the lowest range to the highest. Defined in 8.1.3.

✓ **Real difference** · large

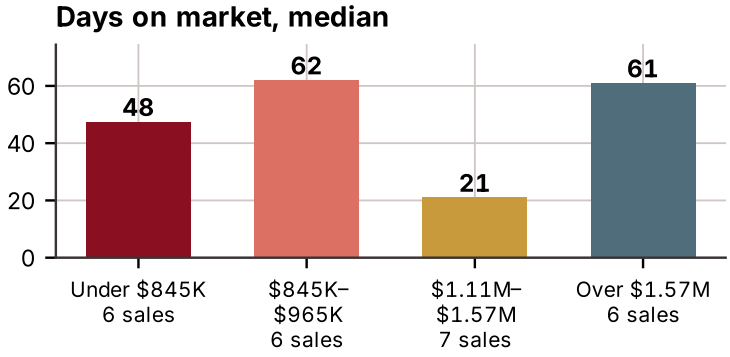

3.5 Year built: no clear difference

The median is **2019** for homes over $1.57M and **2014** for homes under $845K. It rises step by step from the lowest range to the highest. Defined in 8.1.4.

– **No clear difference** · could be chance

3.6 Days on market: no clear difference

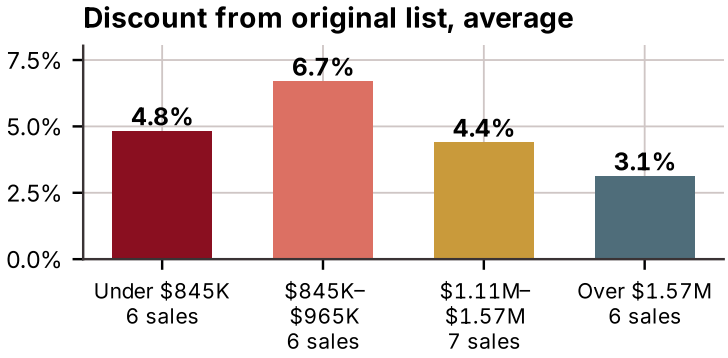

The median is **61 days** for homes over $1.57M and **48 days** for homes under $845K. It does not move in a straight line; homes $845K–$965K are highest. Defined in 8.1.5.

– **No clear difference** · could be chance

 © 2026 Alexander Tiffany Southwest, LLC

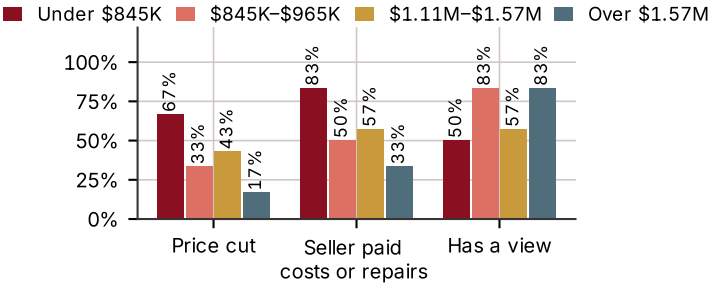

3.7 Discount from original list: no clear difference

The average is **3.1%** for homes over $1.57M and **4.8%** for homes under $845K. It does not move in a straight line; homes $845K–$965K are highest. Defined in 8.1.6.

– No clear difference · could be chance

3.8 How often: price cut before sale, seller paid closing costs or repairs, has a view

Each bar is the share of homes in the group, in percent.

- 17% of homes over $1.57M had a price cut before sale, against 67% of homes under $845K. Defined in 8.1.7.
- 33% of homes over $1.57M had the seller pay closing costs or repairs, against 83% of homes under $845K. Defined in 8.1.8.
- 83% of homes over $1.57M have a view, against 50% of homes under $845K. Defined in 8.1.9.

Price cut before sale: **– No clear difference** · could be chance
Seller paid closing costs or repairs: **– No clear difference** · could be chance
Has a view: **– No clear difference** · could be chance

3.9 The numbers: price and size

	Under $845K 6 sales	$845K–$965K 6 sales	$1.11M–$1.57M 7 sales	Over $1.57M 6 sales	All 25 sales	Real difference?
Net sale price average	$751,027	$893,264	$1,311,314	$2,381,549	$1,333,370	by design

4. Quartiles by living area

Resale homes · 25 sales · November 9, 2025 – November 8, 2026

Sales ranked by living area and cut into four equal groups, from the smallest homes to the largest.

Sales per group

- Under 3,268 SF: 6 sales (24%)
- 3,268–3,487 SF: 6 sales (24%)
- 3,514–4,632 SF: 7 sales (28%)
- Over 4,632 SF: 6 sales (24%)

Bottom line

- Homes over 4,632 SF sell for about $1.58M (202%) more than homes under 3,268 SF.
- Homes over 4,632 SF sell for about $147 per SF (55%) more than homes under 3,268 SF.

4.1 Key differences

The top group against the bottom group. Only real differences are listed. Section 8 explains each measure.

Under 3,268 SF · 3,268–3,487 SF · 3,514–4,632 SF · Over 4,632 SF

Larger homes Over 4,632 SF

- Sell for much more.
- Sell for more per square foot.

Smaller homes Under 3,268 SF

- Sell for much less.
- Sell for less per square foot.

5. Quartiles by year built

Resale homes · 25 sales · November 9, 2025 – November 8, 2026

Sales ranked by year built and cut into four groups, from the oldest to the newest. Homes built in the same year always stay in the same group, so group sizes can differ a little.

Bottom line: no measure differs enough between the groups to rule out chance.

5.1 Key differences

The top group against the bottom group: no measure differs enough to rule out chance.

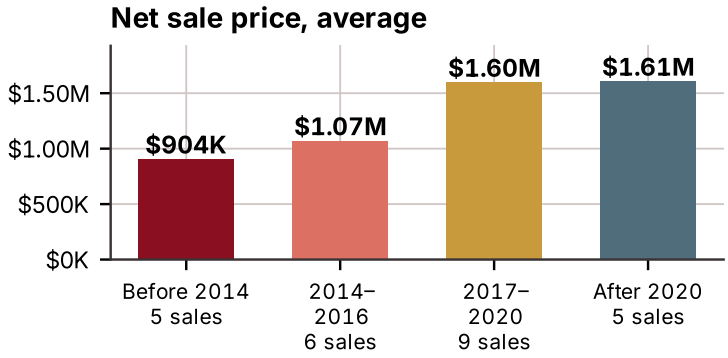

5.2 At a glance

Shaded rows are real differences; the darkest cell is the highest. Gray rows show no clear difference. Prices are averages; days on market and year built are medians.

7. New construction

Basic statistics · 3 sales · November 9, 2025 – November 8, 2026

Homes sold new by the builder in the same 365 days. They are left out of every other section and shown here as basic figures only: 3 sales, no groups, no tests.

> **Note**: these are only the new-construction sales reported in ABOR MLS. Builders often sell homes without listing them in the MLS, so these figures do not necessarily represent all new-construction sales in Lakeway Highlands.

Measure	Average	Median
Sales		3
Net sale price	**$4,785,000**	$4,100,000
Net price per SF	**$776**	$786
Living area (SF)	**6,153**	5,462
Days on market	**137**	118
Discount from original list	**3.8%**	3.5%
Price cut before sale		33% of sales
Seller paid closing costs or repairs		0% of sales
Year built		2025–2026

Same definitions as the rest of the study (section 8). New construction = NewConstructionYN true, or PropertyCondition “New Construction” or “Under Construction”.

8. Appendix

Measures, methods and tests

Each measure and method three ways: in plain words, as statistics, and with the data from this study.

8.1 Measures

8.1.1 Net sale price

In simple terms What the seller actually kept: the closing price, less money the seller gave back to the buyer for closing costs or repairs. It is the truest price for comparing homes.

Statistically Net = ClosePrice − ACTRIS_BuyersClsgCostPdbySell − ACTRIS_RepairsAmount (a blank counts as $0). Summarized by the arithmetic mean in the slices.

The data 25 resale sales. Average $1,333,370; median $1,105,200; standard deviation $726,291; middle half (25th–75th percentile) $845,000–$1,571,500; lowest $648,000, highest $3,294,296. 14 sales had a seller payment; their median payment was $5,852.

8.1.2 Net price per SF

In simple terms Net sale price divided by the heated and cooled square feet. It puts homes of different sizes on the same footing: did buyers pay more for each square foot, not just for more square feet?

Statistically psf = Net ÷ LivingArea, per sale; summarized by the mean of the per-sale ratios.

The data 25 resale sales. Average $316; median $297; standard deviation $84; middle half (25th–75th percentile) $270–$339; lowest $227, highest $553.

8.1.3 Living area

In simple terms The heated and cooled space, as listed in the MLS. Garages and porches are not counted.

Statistically RESO LivingArea, in square feet. Sales under 400 SF are treated as entry errors and left out.

The data 25 resale sales. Average 4,028; median 3,514; standard deviation 1,197; middle half (25th–75th percentile) 3,268–4,632; lowest 2,333, highest 7,820.

8.1.4 Year built

In simple terms The year the home was finished, as listed in the MLS. It shows whether a group leans to older or newer phases of the community.

Statistically RESO YearBuilt; summarized by the median, with the 25th–75th percentile (middle half) on the charts.

The data 25 resale sales. Average 2017; median 2017; standard deviation 3; middle half (25th–75th percentile) 2014–2020; lowest 2010, highest 2022.

 © 2026 Alexander Tiffany Southwest, LLC

8.1.5 Days on market

In simple terms	How many days the home was on the market before the buyer's offer was accepted, counting any earlier listing periods (relists). This is the days on market agents and clients quote.
Statistically	CDOM = max(CumulativeDaysOnMarket, DaysOnMarket, PurchaseContractDate − ListingContractDate). The MLS counter can freeze at a price change, so the contract-date gap is a floor. Summarized by the median, because a few homes that sat for months pull an average up.
The data	25 resale sales. Average 85; median 42; standard deviation 111; middle half (25th–75th percentile) 15–93; lowest 3, highest 478. 0 sales went under contract on their listing date (0 days).

8.1.6 Discount from original list

In simple terms	How far below the first asking price the home sold, after seller payments. It measures how much negotiating room sellers gave up. A negative figure means the home sold above its first asking price.
Statistically	Discount % = (OriginalListPrice − Net) ÷ OriginalListPrice × 100, per sale; summarized by the mean.
The data	25 resale sales. Average 4.7%; median 3.9%; standard deviation 4.6%; middle half (25th–75th percentile) 0.8%–8.6%; lowest −1.3%, highest 16.3%. 3 sales closed above their first asking price.

8.1.7 Price cut before sale

In simple terms	The asking price was lowered at least once before the home went under contract.
Statistically	Indicator: ListPrice at close < OriginalListPrice. Reported as the share of sales (%).
The data	10 of 25 resale sales (40.0%).

8.1.8 Seller paid closing costs or repairs

In simple terms	The seller paid some of the buyer's closing costs or repairs.
Statistically	Indicator: ACTRIS_BuyersCIsgCostPdbySell + ACTRIS_RepairsAmount > 0. Reported as the share of sales (%).
The data	14 of 25 resale sales (56.0%).

8.1.9 Has a view

In simple terms	The MLS says the home looks over something: a greenbelt or park, trees, golf course, hill country, water and similar.
Statistically	View = the View field holds any entry other than “None”, “Neighborhood” or “See Remarks”. No view = only “None” and/or “Neighborhood”. A record whose only entry is “See Remarks” cannot be classified and is left out of the view slice.
The data	17 sales with a view, 7 without, 1 unclassified. Most common View entries: Hill Country 14, Park/Greenbelt 8, Neighborhood 6, Trees/Woods 5, None 4, See Remarks 4, Lake 3, Panoramic 3.

8.2 Methods

8.2.1 Data source

In simple terms Every figure comes from the Austin Board of REALTORS® MLS, read live by ALEX. No figure is estimated or typed in.

Statistically ABOR MLS via secure APIs, read from ALEX's copy of the MLS (refreshed every 15 minutes; this pull as of 2026-11-09 11:00 UTC), every field. Filter: StandardStatus = Closed, PropertyType = Residential, City = Austin, SubdivisionName contains any of “lakeway highlands”, “lakeway hlnds” (case-insensitive). A record is kept when its subdivision name belongs to the Lakeway Highlands family, the same rule comparable sales use (it includes Lakeway Hlnds, proven adjacent and priced alike).

The data Pulled November 9, 2026: 28 closed Lakeway Highlands records over the prior year, in ZIP 78738. 18 subdivision spellings kept, the most common: Lakeway Highlands Ph 1 Sec 7B (4); Lakeway Hlnds Ph 1 Sec 5 (3); Lakeway Hlnds Ph 3 Sec 6B (2); Lakeway Highlands Ph 1 Sec 5 (2); Lakeway Highlands Ph 1 Sec 8A (2); Lakeway Highlands Ph 01 Sec 01 (2); Lakeway Highlands Ph 01 Sec 02 (2); Lakeway Hlnds Ph 2 Sec 6 (1); Lakeway Hlnds Ph 3 Sec 1 (1); Lakeway Highlands Ph 2 Sec 2A (1); Lakeway Hlnds Ph 1 Sec 8C (1); Lakeway Highlands Ph 2 Sec 3 (1); and 6 more (6 records). Names found by the search but not part of Lakeway Highlands, left out: Rough Hollow - Lakeway Highlands Ph 1 Sec 6 (1); Rough Hollow, Lakeway Highlands Ph 2 Sec 4 (1); Rough Hollow - Lakeway Highlands Ph 1 Sec 5 (1).

8.2.2 Study window

In simple terms The most recent 365 days of closed sales: recent enough to describe today's market, long enough to give each group plenty of sales. The usual window is 180 days; it holds only 19 resale sales here (under 80), so the full year is used.

Statistically CloseDate from November 9, 2025 to November 8, 2026 inclusive.

The data 28 single-family sales in the window: 25 resale, 3 new construction.

8.2.3 Resale and new construction

In simple terms A resale home was previously owned. New construction is sold by the builder and behaves differently, so it is kept out of every analysis and reported once on its own.

Statistically New construction = NewConstructionYN true, or PropertyCondition contains “New Construction” or “Under Construction”. Everything else is resale.

The data 25 resale; 3 new construction.

8.2.4 Sales left out

In simple terms A few records cannot be used as entered and are left out before any analysis.

Statistically Excluded: PropertySubType other than Single Family Residence; no OriginalListPrice; LivingArea under 400 SF; seller payments above 10% of ClosePrice (treated as entry errors).

The data None in this window.

 © 2026 Alexander Tiffany Southwest, LLC

8.2.5 Quartiles and groups

In simple terms Sales lined up from lowest to highest and cut into four groups of about equal size. Each group is named by its range, for example “Under $845K”.

Statistically Sort by the slicing variable; cut k sits at round(nk/4), k = 1…3. A cut that would split tied values moves to the nearer edge of the tie. A group under 3 sales merges into its smaller neighbor. Range names use the next group's lowest value (“Under”) and the previous group's highest value (“Over”/“After”).

The data **Quartiles by net sale price:** Under $845K: $648,000–$817,000 (6 sales); $845K–$965K: $845,000–$964,997 (6 sales); $1.11M–$1.57M: $1,105,200–$1,571,500 (7 sales); Over $1.57M: $1,685,000–$3,294,296 (6 sales)
Quartiles by living area: Under 3,268 SF: 2,333–3,233 SF (6 sales); 3,268–3,487 SF: 3,268–3,487 SF (6 sales); 3,514–4,632 SF: 3,514–4,632 SF (7 sales); Over 4,632 SF: 4,747–7,820 SF (6 sales)
Quartiles by year built: Before 2014: 2010–2013 (5 sales); 2014–2016: 2014–2016 (6 sales); 2017–2020: 2017–2020 (9 sales); After 2020: 2021–2022 (5 sales)
View and no view: View: MLS lists a view (17 sales); No view: None or Neighborhood (7 sales)

8.2.6 Average and median

In simple terms The average adds the values and divides by how many; one very expensive home can pull it up. The median is the middle value, with half above and half below.

Statistically Mean $\bar{x} = (1/n)\ \Sigma\ x_i$; median = 50th percentile. Price, price per SF, living area and discount use the mean; days on market and year built use the median (skewed or whole-year values).

The data Net sale price: average $1,333,370, median $1,105,200. Days on market: average 85, median 42: the average is pulled up by a few long listings.

8.2.7 Kruskal–Wallis test

In simple terms Checks whether a measure really differs across the four groups of a slice. It uses each sale's rank, not its value, so a few extreme sales cannot drive the answer.

Statistically $H = [12/(n(n+1))]\ \Sigma\ R_j^2/n_j - 3(n+1)$, compared with χ^2 on k − 1 degrees of freedom (Kruskal & Wallis, 1952). Effect size $\varepsilon^2 = H/(n-1)$: ≥ .01 small, ≥ .06 medium, ≥ .14 large (Tomczak & Tomczak, 2014). A slice is tested only when every group has at least 5 sales; smaller groups are described, not tested.

The data Run on every measure in sections 3–5; each result is in 8.3.

8.2.8 Mann–Whitney U test

In simple terms The same check when there are only two groups: view against no view.

Statistically Two-sided U test (Mann & Whitney, 1947). Effect size = rank-biserial correlation $|1 - 2U/(n_1 n_2)|$: ≥ .10 small, ≥ .30 medium, ≥ .50 large (Kerby, 2014; Cohen, 1988).

The data Run on every measure in section 6; results in 8.3.

8.2.9 Chi-square test

In simple terms Checks whether a yes/no share (price cut, seller payment, view) differs between groups more than chance would.

Statistically Pearson χ^2 on the 2 × k table of counts, no continuity correction (Pearson, 1900). Effect size Cramér's $V = \sqrt{(\chi^2/n)}$: ≥ .10 small, ≥ .30 medium, ≥ .50 large (Cramér, 1946).

The data Run on the three shares in every slice; results in 8.3.

 © 2026 Alexander Tiffany Southwest, LLC

8.2.10 Real difference (significance)

In simple terms "Real difference" means a gap this large would be very unlikely if the groups were really alike. Because many measures are checked in each slice, the bar is set higher than usual.

Statistically Significant when $p < 0.05 \div m$, where m is the number of measures tested in that slice (Bonferroni; Dunn, 1961). The slicing variable itself differs by design and is not tested.

The data Quartiles by net sale price: m = 8, threshold $p < 0.0063$; Quartiles by living area: m = 8, threshold $p < 0.0063$; Quartiles by year built: m = 8, threshold $p < 0.0063$; View and no view: m = 8, threshold $p < 0.0063$

8.2.11 Size of a difference

In simple terms A difference can be real but small. The size word (small, medium, large) says how much the groups pull apart.

Statistically ε^2 for Kruskal–Wallis, rank-biserial r for Mann–Whitney, Cramér's V for chi-square, with the thresholds above; below the small threshold the size is "negligible".

The data 4 real differences across the four slices; sizes are listed in 8.3.

8.2.12 Rounding in the text

In simple terms Headings and sentences round figures so they read easily; the tables at the end of each section give them in full.

Statistically Prices in headings round to the nearest $1K; price per SF and days on market to the nearest whole number; living area to the nearest 10 SF; shares and percentage gaps to whole percents.

The data Days on market is always shown in days.

8.3 Test results

Every test behind every gold box. Statistic, degrees of freedom (df), p-value, the threshold it must beat, and the size of the difference.
