1. Summary

Resale homes · 54 sales · November 8, 2025 – November 7, 2026

This study looks at the **54 resale homes** sold in Carriage Hills in the **365 days** to November 7, 2026. A full year is used because only 29 resale homes sold in the last 180 days. New construction is left out and shown on its own in section 7. The homes are compared four ways: **by price**, **by living area**, **by year built** and **with or without a view**. The first three are split into four equal groups (quartiles), each named by its range.

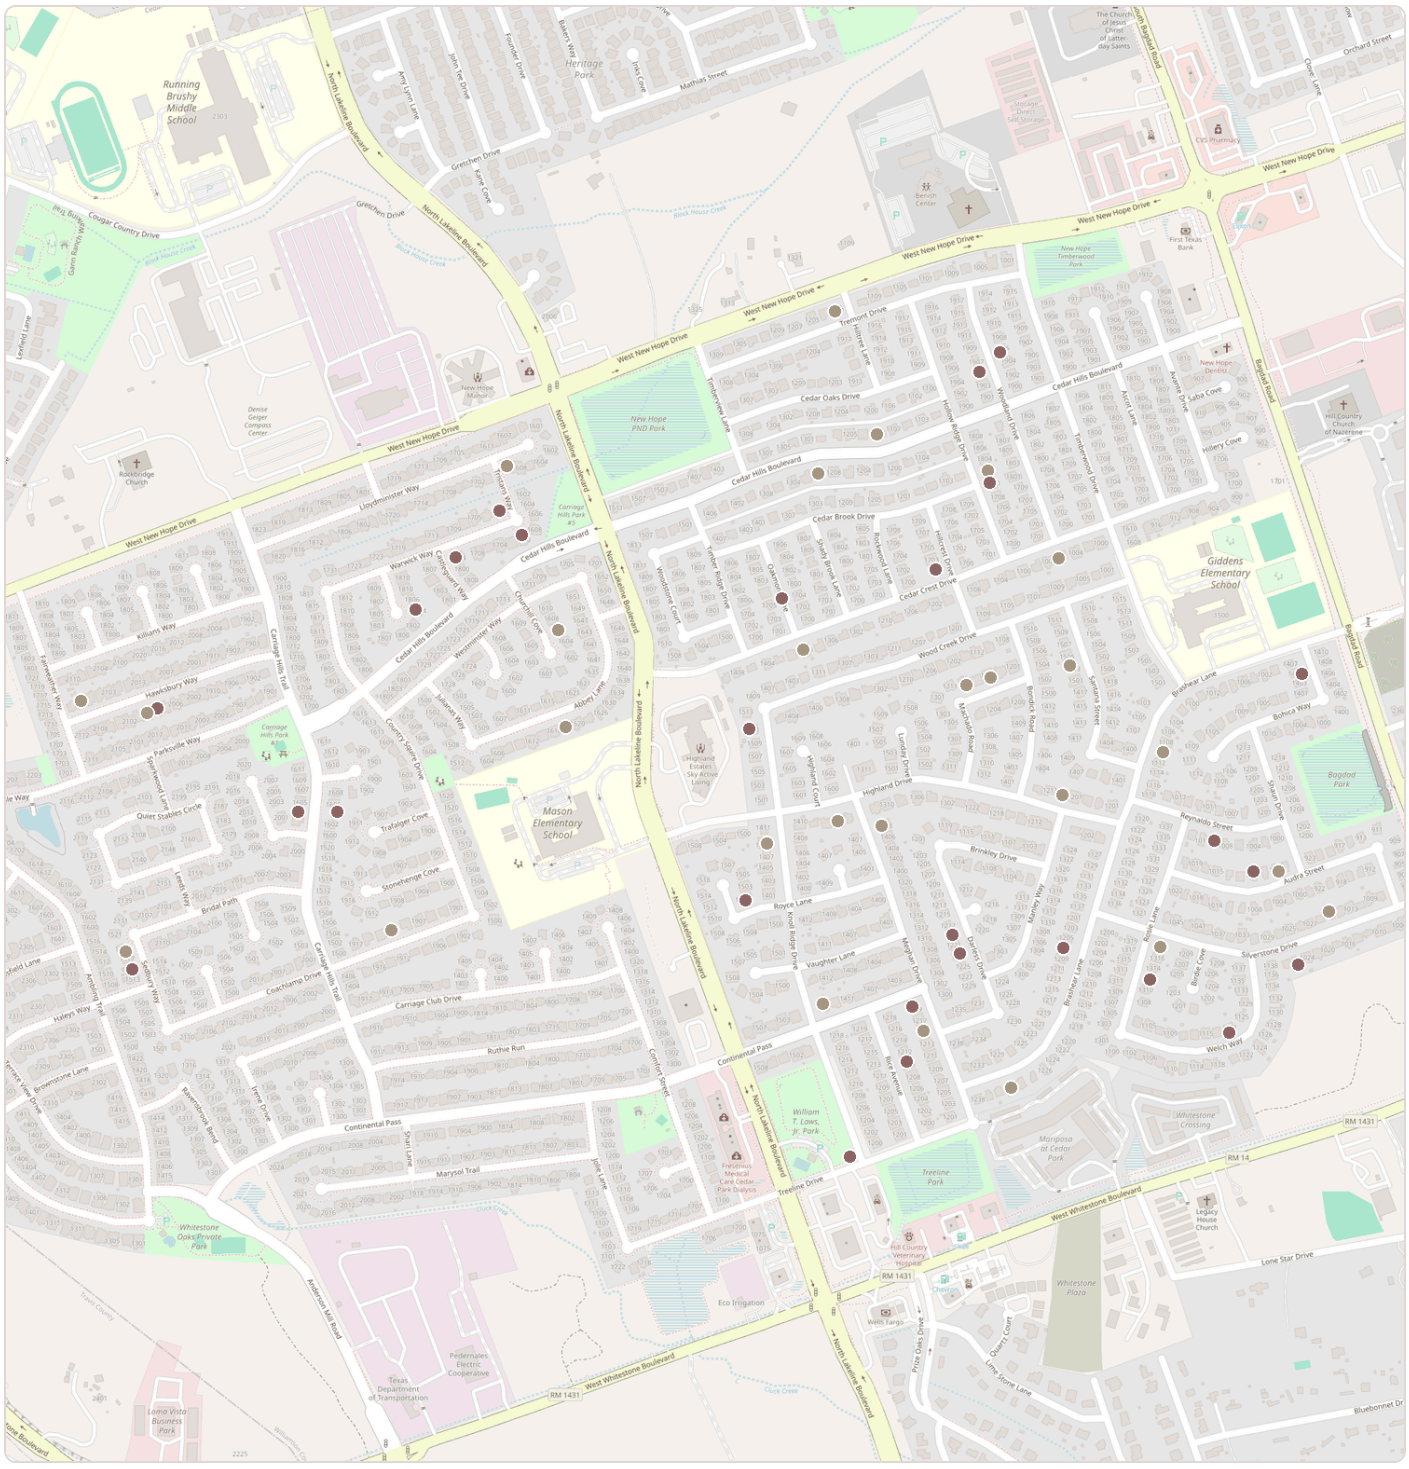

Each comparison has its own section (3–6) with everything about it in one place: the key differences, a table of every measure at a glance, the charts and the numbers.

2. Where the resale homes sold

54 resale homes · colored by price range

Each dot is one resale home, colored by its price range.

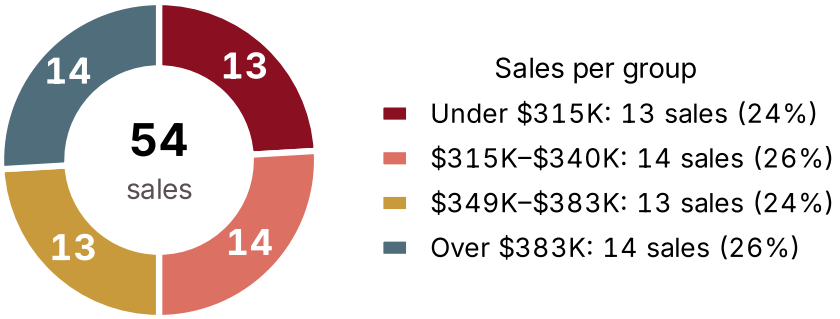

● Under $315K · 13 sales ● $315K–$340K · 14 sales ● $349K–$383K · 13 sales ● Over $383K · 14 sales

© 2026 Alexander Tiffany Southwest, LLC

3. Quartiles by net sale price

Resale homes · 54 sales · November 8, 2025 – November 7, 2026

Sales ranked by net sale price and cut into four equal groups. This is the usual way to read a market by price.

Bottom line

- Homes over $383K are about 730 SF (51%) larger than homes under $315K.
- Homes over $383K sell about 8 percentage points closer to their first asking price than homes under $315K.

3.1 Key differences

The top group against the bottom group. Only real differences are listed. Section 8 explains each measure.

Under $315K $315K–$340K $349K–$383K Over $383K

Higher-priced homes Over $383K

- Are much larger.
- Sell closer to their first asking price.

Lower-priced homes Under $315K

- Are much smaller.
- Sell further below their first asking price.

3.2 At a glance

Shaded rows are real differences; the darkest cell is the highest. Gray rows show no clear difference. Prices are averages; days on market and year built are medians.

	Under $315K	$315K–$340K	$349K–$383K	Over $383K	Real difference?
Net price per SF	$204 per SF	$187 per SF	$202 per SF	$195 per SF	unclear
Living area	1,441 SF **Smallest**	1,821 SF	1,828 SF	2,170 SF **Largest**	✓ large
Year built	1996	1996	1996	1996	unclear
Days on market	51 days	66 days	21 days	23 days	unclear
Discount from original list	11.5% **Biggest**	8.0%	3.1% **Smallest**	3.1%	✓ large
Price cut before sale	62%	71%	46%	43%	unclear
Seller paid closing costs or repairs	46%	71%	62%	79%	unclear
Has a view	0%	0%	0%	7%	unclear

How to read this section. Each heading gives the finding. The gold box says whether the gap is real (✓, with its size) or could be chance (–). The section ends with its numbers; the tests are in section 8.3.

3.3 Net price per SF: no clear difference

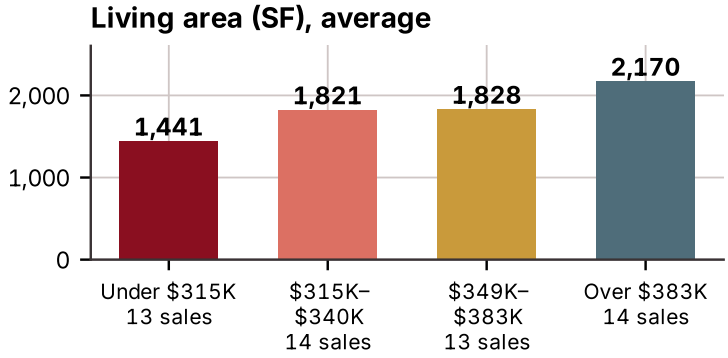

The average is **$195 per SF** for homes over $383K and **$204 per SF** for homes under $315K. It does not move in a straight line; homes under $315K are highest. Defined in 8.1.2.

– No clear difference · could be chance

© 2026 Alexander Tiffany Southwest, LLC

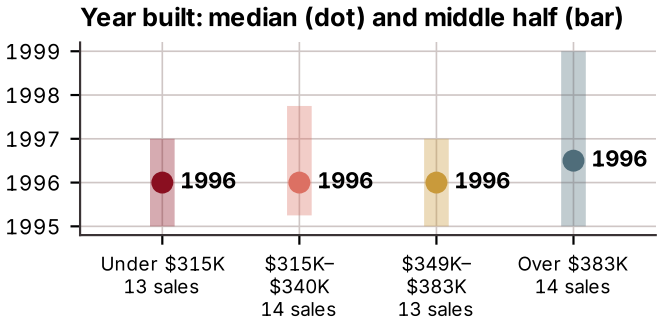

3.4 Homes over $383K are about 730 SF (51%) larger than homes under $315K

The average is **2,170 SF** for homes over $383K and **1,441 SF** for homes under $315K. It rises step by step from the lowest range to the highest. Defined in 8.1.3.

✓ **Real difference** · large

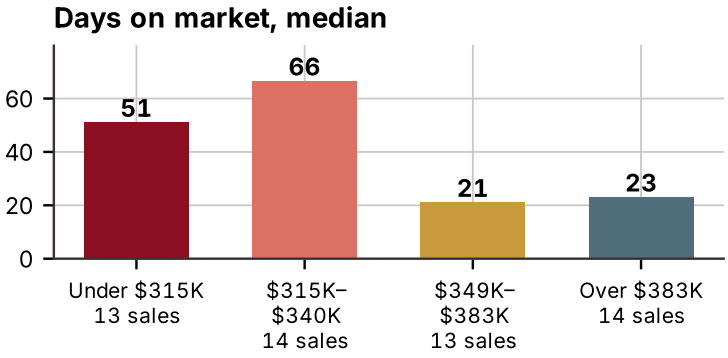

3.5 Year built: no clear difference

The median is **1996** for homes over $383K and **1996** for homes under $315K. It rises step by step from the lowest range to the highest. Defined in 8.1.4.

– **No clear difference** · could be chance

3.6 Days on market: no clear difference

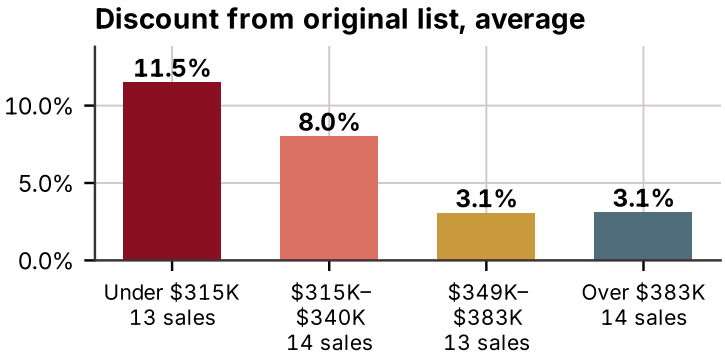

The median is **23 days** for homes over $383K and **51 days** for homes under $315K. It does not move in a straight line; homes $315K–$340K are highest. Defined in 8.1.5.

– **No clear difference** · could be chance

 © 2026 Alexander Tiffany Southwest, LLC

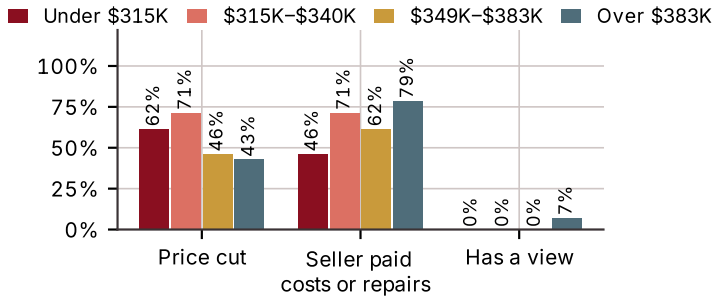

3.7 Homes over $383K sell about 8 percentage points closer to their first asking price than homes under $315K

The average is **3.1%** for homes over $383K and **11.5%** for homes under $315K. It does not move in a straight line; homes under $315K are highest. Defined in 8.1.6.

✓ **Real difference** · large

3.8 How often: price cut before sale, seller paid closing costs or repairs, has a view

Each bar is the share of homes in the group, in percent.

- 43% of homes over $383K had a price cut before sale, against 62% of homes under $315K. Defined in 8.1.7.
- 79% of homes over $383K had the seller pay closing costs or repairs, against 46% of homes under $315K. Defined in 8.1.8.
- 7% of homes over $383K have a view, against 0% of homes under $315K. Defined in 8.1.9.

Price cut before sale: **– No clear difference** · could be chance
Seller paid closing costs or repairs: **– No clear difference** · could be chance
Has a view: **– No clear difference** · could be chance

3.9 The numbers: price and size

	Under $315K 13 sales	$315K–$340K 14 sales	$349K–$383K 13 sales	Over $383K 14 sales	All 54 sales	Real difference?
Net sale price average	$286,444	$327,493	$365,951	$414,460	$349,416	by design

4. Quartiles by living area

Resale homes · 54 sales · November 8, 2025 – November 7, 2026

Sales ranked by living area and cut into four equal groups, from the smallest homes to the largest.

Bottom line

- Homes over 2,133 SF sell for about $60 per SF (27%) less than homes under 1,567 SF.
- Homes over 2,133 SF sell for about $80K (27%) more than homes under 1,567 SF.

4.1 Key differences

The top group against the bottom group. Only real differences are listed. Section 8 explains each measure.

Under 1,567 SF · 1,567–1,743 SF · 1,747–2,133 SF · Over 2,133 SF

Larger homes Over 2,133 SF

- Sell for less per square foot.
- Sell for much more.

Smaller homes Under 1,567 SF

- Sell for more per square foot.
- Sell for much less.

5. Quartiles by year built

Resale homes · 54 sales · November 8, 2025 – November 7, 2026

Sales ranked by year built and cut into four groups, from the oldest to the newest. Homes built in the same year always stay in the same group, so group sizes can differ a little.

Bottom line: no measure differs enough between the groups to rule out chance.

5.1 Key differences

The top group against the bottom group: no measure differs enough to rule out chance.

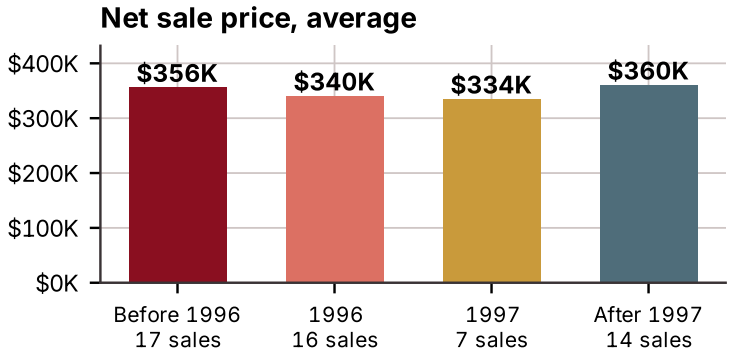

5.2 At a glance

Shaded rows are real differences; the darkest cell is the highest. Gray rows show no clear difference. Prices are averages; days on market and year built are medians.

7. New construction

Basic statistics · 0 sales · November 8, 2025 – November 7, 2026

Homes sold new by the builder in the same 365 days. They are left out of every other section and shown here as basic figures only: 0 sales, no groups, no tests.

> **Note**: these are only the new-construction sales reported in ABOR MLS. Builders often sell homes without listing them in the MLS, so these figures do not necessarily represent all new-construction sales in Carriage Hills.

No new-construction sales were reported in ABOR MLS in this window.

Same definitions as the rest of the study (section 8). New construction = NewConstructionYN true, or PropertyCondition “New Construction” or “Under Construction”.

© 2026 Alexander Tiffany Southwest, LLC

8. Appendix

Measures, methods and tests

Each measure and method three ways: in plain words, as statistics, and with the data from this study.

8.1 Measures

8.1.1 Net sale price

In simple terms What the seller actually kept: the closing price, less money the seller gave back to the buyer for closing costs or repairs. It is the truest price for comparing homes.

Statistically Net = ClosePrice − ACTRIS_BuyersClsgCostPdbySell − ACTRIS_RepairsAmount (a blank counts as $0). Summarized by the arithmetic mean in the slices.

The data 54 resale sales. Average $349,416; median $344,458; standard deviation $51,815; middle half (25th–75th percentile) $315,000–$383,375; lowest $260,000, highest $487,000. 35 sales had a seller payment; their median payment was $5,900.

8.1.2 Net price per SF

In simple terms Net sale price divided by the heated and cooled square feet. It puts homes of different sizes on the same footing: did buyers pay more for each square foot, not just for more square feet?

Statistically psf = Net ÷ LivingArea, per sale; summarized by the mean of the per-sale ratios.

The data 54 resale sales. Average $197; median $195; standard deviation $32; middle half (25th–75th percentile) $177–$218; lowest $121, highest $264.

8.1.3 Living area

In simple terms The heated and cooled space, as listed in the MLS. Garages and porches are not counted.

Statistically RESO LivingArea, in square feet. Sales under 400 SF are treated as entry errors and left out.

The data 54 resale sales. Average 1,822; median 1,745; standard deviation 404; middle half (25th–75th percentile) 1,523–2,142; lowest 1,250, highest 2,850.

8.1.4 Year built

In simple terms The year the home was finished, as listed in the MLS. It shows whether a group leans to older or newer phases of the community.

Statistically RESO YearBuilt; summarized by the median, with the 25th–75th percentile (middle half) on the charts.

The data 54 resale sales. Average 1996; median 1996; standard deviation 2; middle half (25th–75th percentile) 1995–1998; lowest 1993, highest 2000.

© 2026 Alexander Tiffany Southwest, LLC

8.1.5 Days on market

In simple terms	How many days the home was on the market before the buyer's offer was accepted, counting any earlier listing periods (relists). This is the days on market agents and clients quote.
Statistically	CDOM = max(CumulativeDaysOnMarket, DaysOnMarket, PurchaseContractDate − ListingContractDate). The MLS counter can freeze at a price change, so the contract-date gap is a floor. Summarized by the median, because a few homes that sat for months pull an average up.
The data	54 resale sales. Average 59; median 40; standard deviation 66; middle half (25th–75th percentile) 12–74; lowest 3, highest 328. 0 sales went under contract on their listing date (0 days).

8.1.6 Discount from original list

In simple terms	How far below the first asking price the home sold, after seller payments. It measures how much negotiating room sellers gave up. A negative figure means the home sold above its first asking price.
Statistically	Discount % = (OriginalListPrice − Net) ÷ OriginalListPrice × 100, per sale; summarized by the mean.
The data	54 resale sales. Average 6.4%; median 5.5%; standard deviation 5.9%; middle half (25th–75th percentile) 2.7%–9.5%; lowest −4.9%, highest 25.0%. 6 sales closed above their first asking price.

8.1.7 Price cut before sale

In simple terms	The asking price was lowered at least once before the home went under contract.
Statistically	Indicator: ListPrice at close < OriginalListPrice. Reported as the share of sales (%).
The data	30 of 54 resale sales (55.6%).

8.1.8 Seller paid closing costs or repairs

In simple terms	The seller paid some of the buyer's closing costs or repairs.
Statistically	Indicator: ACTRIS_BuyersCIsgCostPdbySell + ACTRIS_RepairsAmount > 0. Reported as the share of sales (%).
The data	35 of 54 resale sales (64.8%).

8.1.9 Has a view

In simple terms	The MLS says the home looks over something: a greenbelt or park, trees, golf course, hill country, water and similar.
Statistically	View = the View field holds any entry other than “None”, “Neighborhood” or “See Remarks”. No view = only “None” and/or “Neighborhood”. A record whose only entry is “See Remarks” cannot be classified and is left out of the view slice.
The data	1 sales with a view, 51 without, 2 unclassified. Most common View entries: None 41, Neighborhood 10, See Remarks 2, Pool 1.

8.2 Methods

8.2.1 Data source

In simple terms Every figure comes from the Austin Board of REALTORS® MLS, read live by ALEX. No figure is estimated or typed in.

Statistically ABOR MLS via secure APIs, read from ALEX's copy of the MLS (refreshed every 15 minutes; this pull as of 2026-11-08 13:00 UTC), every field. Filter: StandardStatus = Closed, PropertyType = Residential, City = Cedar Park, SubdivisionName contains any of “carriage hills”, “crossing at carriage hills”, “cedar park one”, “carriage hills” (case-insensitive). A record is kept when its subdivision name belongs to the Carriage Hills family, the same rule comparable sales use (it includes Crossing At Carriage Hills, Cedar Park One, proven adjacent and priced alike).

The data Pulled November 8, 2026: 54 closed Carriage Hills records over the prior year, in ZIP 78613. 28 subdivision spellings kept, the most common: Cedar Park One Sec 1 (6); Crossing At Carriage Hills Sec 6 (4); Carriage Hills Sec 1 (4); Crossing At Carriage Hills Sec 1 (3); Crossing At Carriage Hills Sec 7 (3); Carriage Hills 3 Sec 5 (3); Crossing At Carriage Hills Sec 3 (3); Carriage Hills 3 Sec 3 (3); Crossing At Carriage Hills (2); Carriage Hills 2 Sec 1 (2); Crossing At Carriage Hills Sec 5 (2); Carriage Hills (2); and 16 more (17 records). Names found by the search but not part of Carriage Hills, left out: Trails At Carriage Hills Sec 1 (4); Trails At Carriage Hills Sec 3 (4); Woods At Carriage Hills Sec 01 (2); Woods At Carriage Hills Sec 2 (1).

8.2.2 Study window

In simple terms The most recent 365 days of closed sales: recent enough to describe today's market, long enough to give each group plenty of sales. The usual window is 180 days; it holds only 29 resale sales here (under 80), so the full year is used.

Statistically CloseDate from November 8, 2025 to November 7, 2026 inclusive.

The data 54 single-family sales in the window: 54 resale, 0 new construction.

8.2.3 Resale and new construction

In simple terms A resale home was previously owned. New construction is sold by the builder and behaves differently, so it is kept out of every analysis and reported once on its own.

Statistically New construction = NewConstructionYN true, or PropertyCondition contains “New Construction” or “Under Construction”. Everything else is resale.

The data 54 resale; 0 new construction.

8.2.4 Sales left out

In simple terms A few records cannot be used as entered and are left out before any analysis.

Statistically Excluded: PropertySubType other than Single Family Residence; no OriginalListPrice; LivingArea under 400 SF; seller payments above 10% of ClosePrice (treated as entry errors).

The data None in this window.

 © 2026 Alexander Tiffany Southwest, LLC

8.2.5 Quartiles and groups

In simple terms Sales lined up from lowest to highest and cut into four groups of about equal size. Each group is named by its range, for example “Under $315K”.

Statistically Sort by the slicing variable; cut k sits at round(nk/4), k = 1…3. A cut that would split tied values moves to the nearer edge of the tie. A group under 3 sales merges into its smaller neighbor. Range names use the next group's lowest value (“Under”) and the previous group's highest value (“Over”/“After”).

The data **Quartiles by net sale price:** Under $315K: $260,000–$310,000 (13 sales); $315K–$340K: $315,000–$340,000 (14 sales); $349K–$383K: $348,915–$383,000 (13 sales); Over $383K: $383,500–$487,000 (14 sales)
Quartiles by living area: Under 1,567 SF: 1,250–1,508 SF (14 sales); 1,567–1,743 SF: 1,567–1,743 SF (13 sales); 1,747–2,133 SF: 1,747–2,133 SF (13 sales); Over 2,133 SF: 2,145–2,850 SF (14 sales)
Quartiles by year built: Before 1996: 1993–1995 (17 sales); 1996: 1996–1996 (16 sales); 1997: 1997–1997 (7 sales); After 1997: 1998–2000 (14 sales)
View and no view: View: MLS lists a view (1 sales); No view: None or Neighborhood (51 sales)

8.2.6 Average and median

In simple terms The average adds the values and divides by how many; one very expensive home can pull it up. The median is the middle value, with half above and half below.

Statistically Mean $\bar{x} = (1/n)\ \Sigma\ x_i$; median = 50th percentile. Price, price per SF, living area and discount use the mean; days on market and year built use the median (skewed or whole-year values).

The data Net sale price: average $349,416, median $344,458. Days on market: average 59, median 40: the average is pulled up by a few long listings.

8.2.7 Kruskal–Wallis test

In simple terms Checks whether a measure really differs across the four groups of a slice. It uses each sale's rank, not its value, so a few extreme sales cannot drive the answer.

Statistically $H = [12/(n(n+1))]\ \Sigma\ R_j^2/n_j - 3(n+1)$, compared with χ^2 on k − 1 degrees of freedom (Kruskal & Wallis, 1952). Effect size $\varepsilon^2 = H/(n-1)$: ≥ .01 small, ≥ .06 medium, ≥ .14 large (Tomczak & Tomczak, 2014). A slice is tested only when every group has at least 5 sales; smaller groups are described, not tested.

The data Run on every measure in sections 3–5; each result is in 8.3.

8.2.8 Mann–Whitney U test

In simple terms The same check when there are only two groups: view against no view.

Statistically Two-sided U test (Mann & Whitney, 1947). Effect size = rank-biserial correlation $\left|1 - 2U/(n_1 n_2)\right|$: ≥ .10 small, ≥ .30 medium, ≥ .50 large (Kerby, 2014; Cohen, 1988).

The data Run on every measure in section 6; results in 8.3.

8.2.9 Chi-square test

In simple terms Checks whether a yes/no share (price cut, seller payment, view) differs between groups more than chance would.

Statistically Pearson χ^2 on the 2 × k table of counts, no continuity correction (Pearson, 1900). Effect size Cramér's $V = \sqrt{(\chi^2/n)}$: ≥ .10 small, ≥ .30 medium, ≥ .50 large (Cramér, 1946).

The data Run on the three shares in every slice; results in 8.3.

© 2026 Alexander Tiffany Southwest, LLC

8.2.10 Real difference (significance)

In simple terms "Real difference" means a gap this large would be very unlikely if the groups were really alike. Because many measures are checked in each slice, the bar is set higher than usual.

Statistically Significant when $p < 0.05 \div m$, where m is the number of measures tested in that slice (Bonferroni; Dunn, 1961). The slicing variable itself differs by design and is not tested.

The data Quartiles by net sale price: m = 8, threshold $p < 0.0063$; Quartiles by living area: m = 8, threshold $p < 0.0063$; Quartiles by year built: m = 8, threshold $p < 0.0063$

8.2.11 Size of a difference

In simple terms A difference can be real but small. The size word (small, medium, large) says how much the groups pull apart.

Statistically ε^2 for Kruskal–Wallis, rank-biserial r for Mann–Whitney, Cramér's V for chi-square, with the thresholds above; below the small threshold the size is "negligible".

The data 4 real differences across the four slices; sizes are listed in 8.3.

8.2.12 Rounding in the text

In simple terms Headings and sentences round figures so they read easily; the tables at the end of each section give them in full.

Statistically Prices in headings round to the nearest $1K; price per SF and days on market to the nearest whole number; living area to the nearest 10 SF; shares and percentage gaps to whole percents.

The data Days on market is always shown in days.

8.3 Test results

Every test behind every gold box. Statistic, degrees of freedom (df), p-value, the threshold it must beat, and the size of the difference.

8.3.1 Quartiles by net sale price

Measure	Test	Statistic	df	p-value	Threshold	Real difference?	Effect size	Size
Net price per SF	Kruskal–Wallis	$H = 2.62$	3	0.4535	$p < 0.0063$	**Unclear**	$\varepsilon^2 = 0.049$	small
Living area	Kruskal–Wallis	$H = 22.31$	3	< 0.0001	$p < 0.0063$	**Yes**	$\varepsilon^2 = 0.421$	large
Year built	Kruskal–Wallis	$H = 0.98$	3	0.8056	$p < 0.0063$	**Unclear**	$\varepsilon^2 = 0.019$	small
Days on market	Kruskal–Wallis	$H = 6.93$	3	0.0740	$p < 0.0063$	**Unclear**	$\varepsilon^2 = 0.131$	medium
Discount from original list	Kruskal–Wallis	$H = 20.27$	3	0.0001	$p < 0.0063$	**Yes**	$\varepsilon^2 = 0.382$	large
Price cut before sale	Chi-square	$\chi^2 = 3.00$	3	0.3921	$p < 0.0063$	**Unclear**	Cramér's V = 0.236	small
Seller paid closing costs or repairs	Chi-square	$\chi^2 = 3.48$	3	0.3238	$p < 0.0063$	**Unclear**	Cramér's V = 0.254	small
Has a view	Chi-square	$\chi^2 = 2.91$	3	0.4055	$p < 0.0063$	**Unclear**	Cramér's V = 0.232	small

8.3.2 Quartiles by living area

Measure	Test	Statistic	df	p-value	Threshold	Real difference?	Effect size	Size
Net sale price	Kruskal–Wallis	H = 22.54	3	< 0.0001	p < 0.0063	**Yes**	$\varepsilon^2 = 0.425$	large
Net price per SF	Kruskal–Wallis	H = 31.12	3	< 0.0001	p < 0.0063	**Yes**	$\varepsilon^2 = 0.587$	large
Year built	Kruskal–Wallis	H = 6.06	3	0.1087	p < 0.0063	**Unclear**	$\varepsilon^2 = 0.114$	medium
Days on market	Kruskal–Wallis	H = 5.02	3	0.1701	p < 0.0063	**Unclear**	$\varepsilon^2 = 0.095$	medium
Discount from original list	Kruskal–Wallis	H = 7.99	3	0.0462	p < 0.0063	**Unclear**	$\varepsilon^2 = 0.151$	large
Price cut before sale	Chi-square	$\chi^2 = 2.08$	3	0.5551	p < 0.0063	**Unclear**	Cramér's V = 0.196	small
Seller paid closing costs or repairs	Chi-square	$\chi^2 = 3.02$	3	0.3887	p < 0.0063	**Unclear**	Cramér's V = 0.236	small
Has a view	Chi-square	$\chi^2 = 3.21$	3	0.3599	p < 0.0063	**Unclear**	Cramér's V = 0.244	small

8.3.3 Quartiles by year built

Measure	Test	Statistic	df	p-value	Threshold	Real difference?	Effect size	Size
Net sale price	Kruskal–Wallis	H = 1.52	3	0.6770	p < 0.0063	**Unclear**	$\varepsilon^2 = 0.029$	small
Net price per SF	Kruskal–Wallis	H = 6.88	3	0.0757	p < 0.0063	**Unclear**	$\varepsilon^2 = 0.130$	medium
Living area	Kruskal–Wallis	H = 9.76	3	0.0207	p < 0.0063	**Unclear**	$\varepsilon^2 = 0.184$	large
Days on market	Kruskal–Wallis	H = 5.32	3	0.1500	p < 0.0063	**Unclear**	$\varepsilon^2 = 0.100$	medium
Discount from original list	Kruskal–Wallis	H = 3.59	3	0.3096	p < 0.0063	**Unclear**	$\varepsilon^2 = 0.068$	medium
Price cut before sale	Chi-square	$\chi^2 = 1.23$	3	0.7461	p < 0.0063	**Unclear**	Cramér's V = 0.151	small
Seller paid closing costs or repairs	Chi-square	$\chi^2 = 2.03$	3	0.5653	p < 0.0063	**Unclear**	Cramér's V = 0.194	small
Has a view	Chi-square	$\chi^2 = 2.22$	3	0.5285	p < 0.0063	**Unclear**	Cramér's V = 0.203	small

8.3.4 View and no view

Too few sales in a group to test.
