Nations with AI Ethics Committees

147 of UNESCO's 193 member states have established national AI ethics committees, inspired by its framework.

This significant adoption demonstrates a growing global commitment to AI ethics at the national level. It shows that abstract principles are translating into tangible structures for governance and oversight, moving towards enforceable standards.

01

Making Child Safety a Core AI Design Principle

UN Secretary-General Guterres advocates for an "AI Child Safety Pledge," requiring companies to prove AI systems are safe before making them accessible to children. This includes preventing the generation of harmful content and connecting distressed children to human support.

02

Embedding AI Governance Directly into Operational Workflows

A UNDP report reveals that many consequential AI governance decisions are made in procurement, vendor contracts, and software updates, not just policy frameworks. Effective governance requires embedding ethical considerations directly into these operational settings for real-world impact.
