THE DATA

56%

Higher Earnings for AI Skills

Workers with AI skills are earning significantly more than their peers in the same roles. [BREAKING]

According to PwC's Global AI Jobs Barometer, workers possessing AI skills earn 56% more than colleagues in identical roles lacking such expertise. This highlights a growing demand and premium for AI literacy across industries, directly influencing the curriculum and career preparation strategies of higher education institutions.

01

AI Accelerates Research & Discovery Across Disciplines

AI is removing traditional barriers in scientific discovery by finding patterns in massive datasets, generating new ideas, and running complex simulations. This acceleration is evident from modeling human cells to decoding the universe, empowering scientists to push the boundaries of what is knowable at an unprecedented pace.

02

Curriculum Redesign Essential for Workforce Readiness

The rapid evolution of AI necessitates a fundamental shift in educational offerings. Universities must integrate applied AI concentrations into core degree programs to equip students with critical skills. This proactive approach ensures graduates are prepared for an AI-enabled workforce, where AI literacy is becoming a prerequisite for employment.
