The U.S. has not demonstrated a permanent disposal solution for high- level

Permanent Disposal Status

Despite decades of debate, no operational deep geological repository exists in the U.S.

This gap isn't due to technical failure but to political and communicative breakdowns. The U.S. has not moved beyond the Yucca Mountain impasse, while Finland, Sweden, and Switzerland have advanced sites based on scientific consensus and public trust. The absence of a permanent solution is not a failure of engineering, but of societal alignment.

AI Can Simulate Public Trust

This isn't about predicting reactor behavior—it's about predicting human behavior. The success of nuclear waste disposal isn't just about geology; it's about social acceptability, and AI can model that dimension with unprecedented precision.

AI Reveals the Real Risk Misalignment

When AI shows that the cost of ignoring chemical waste is higher than the cost of delayed nuclear disposal, it forces a recalibration of risk assessment. The safety argument isn't just technical—it's economic, ethical, and political.
