

AI Can't Listen. But We Can.

The future of higher ed isn't in smarter algorithms—it's in deeper listening.

96

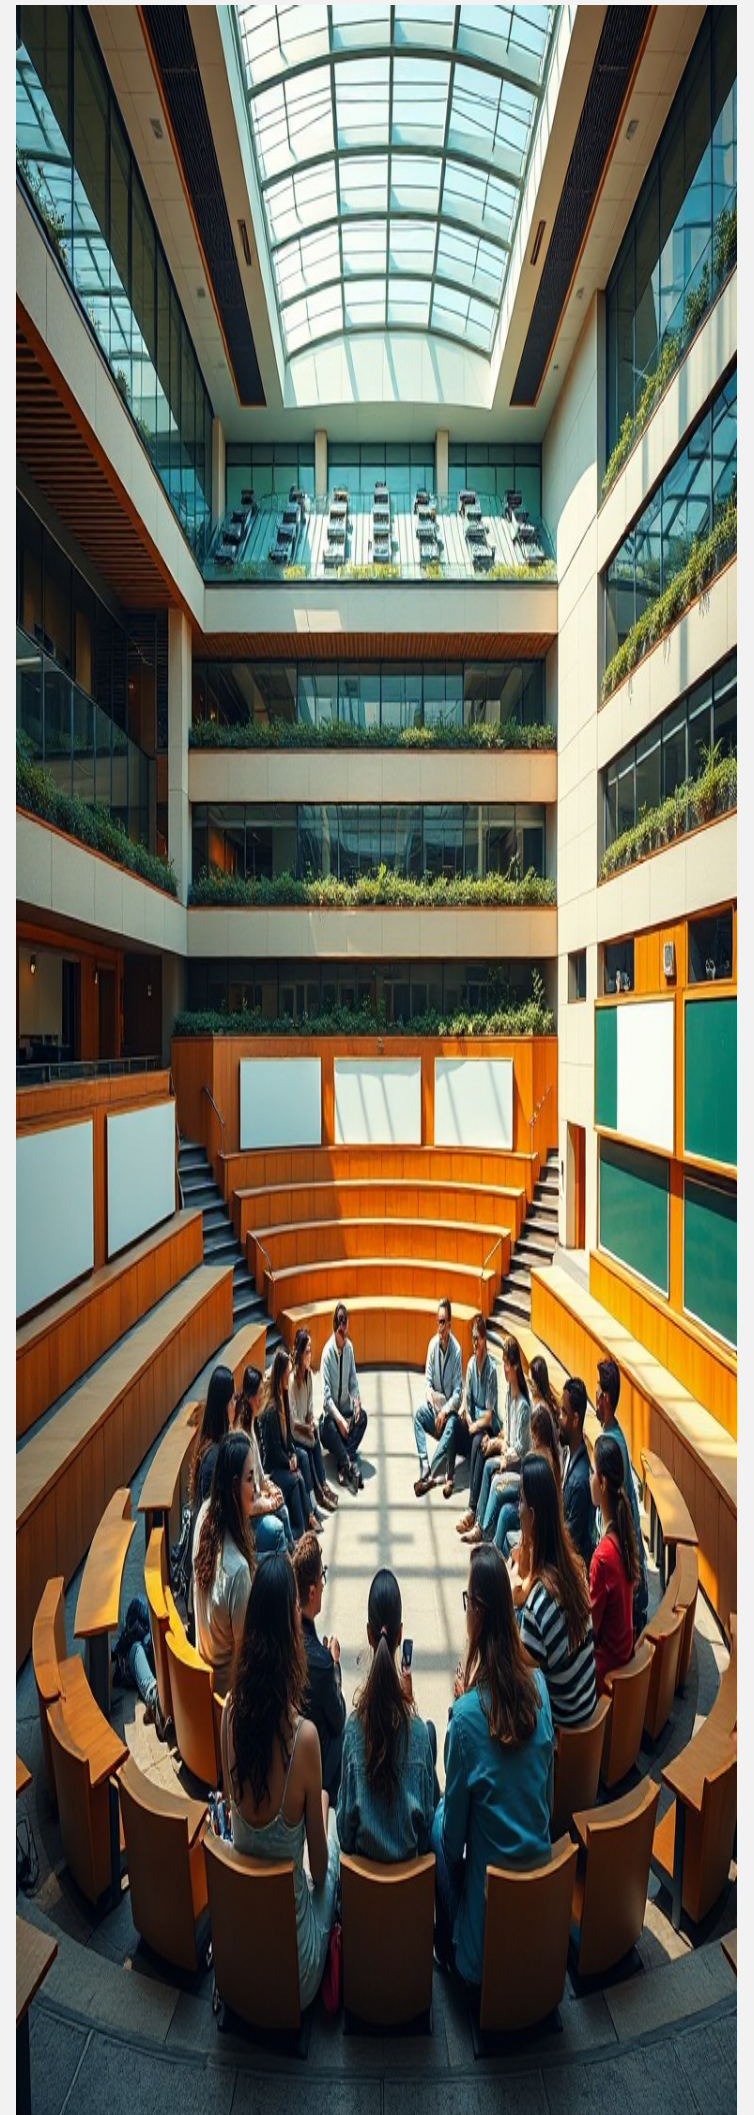

Institutions

A new study of 96 UK universities reveals widespread AI monitoring use without student consent.

The UK's Higher Education Policy Institute (HEPI) analyzed institutional policies and found that 96 universities deploy AI-driven surveillance tools—ranging from attendance tracking to behavioral prediction—without transparent consent mechanisms. This reflects a systemic gap between technological adoption and ethical accountability.

01

Monitoring ≠ Engagement

AI systems in higher education often mistake surveillance for insight. When institutions use AI to track student behavior without dialogue, they replace trust with control. True intelligence emerges not from data capture, but from reciprocal listening—where students, faculty, and administrators co-create learning ecosystems.

02

Ethics Must Precede Efficiency

The rush to implement AI monitoring tools undermines academic integrity. Institutions that deploy AI without consent or oversight risk eroding the very culture of inquiry they seek to preserve. The real test of AI in education isn't how much data it collects—but whether it fosters a community where listening is valued as much as output.
