

AI Is Teaching AI — at Scale

MIT's new initiative reveals how learning by doing is rewiring STEM education.

Swipe for insights →

THE DATA

1 million

Students Reached

Through MIT RAISE's Day of AI event earlier this year.

This milestone reflects the growing scale of AI literacy initiatives in education. The number underscores that AI is no longer confined to elite institutions — it's being embedded into public learning ecosystems at unprecedented speed.

01

AI Fluency Is the New Literacy

This redefines education: students aren't just learning to use AI — they're learning to shape it. In quantum and AI markets, this implies that future talent will be defined not by coding alone, but by their ability to reason about AI's role in systems design, ethics, and innovation.

02

The Quantum Edge Begins in the Classroom

By integrating AI and physical prototyping early, the initiative is building a new kind of talent pipeline. In AI and quantum markets, this means that the most valuable developers won't just write algorithms — they'll design systems that interface with quantum hardware, materials, and real-time feedback loops.
