

AI in Healthcare Isn't Just Diagnosing

It's learning how to learn—starting with libraries.

THE DATA

Gift to Penn Library

The Meister Gift is transforming the University of Pennsylvania's library into a hub for AI-driven knowledge curation.

This donation marks a pivotal shift: AI in healthcare is no longer just about analyzing patient data or predicting outcomes. It's about training systems to understand and organize the vast, unstructured corpus of medical literature, historical case studies, and emerging research. The gift funds the development of AI tools that can trace the evolution of medical understanding across decades, identifying subtle shifts in diagnosis, treatment, and theory.

01

Knowledge Is the New Training Data

For example, AI trained on digitized 19th-century surgical case logs can detect early signs of diagnostic bias that persist today. This isn't about faster diagnosis—it's about preventing the recurrence of historical blind spots in medical judgment.

02

Libraries Are the New AI Labs

This shift implies that the future of medical AI depends not on more data, but on better curation. The ability to track how ideas evolve—what was once considered truth, what was discarded, and why—becomes a critical skill for AI to avoid repeating past errors.
