

AI Safety: Triumph or Procrastination?

Experts split on whether the Trump-Xi summit delivered real progress.

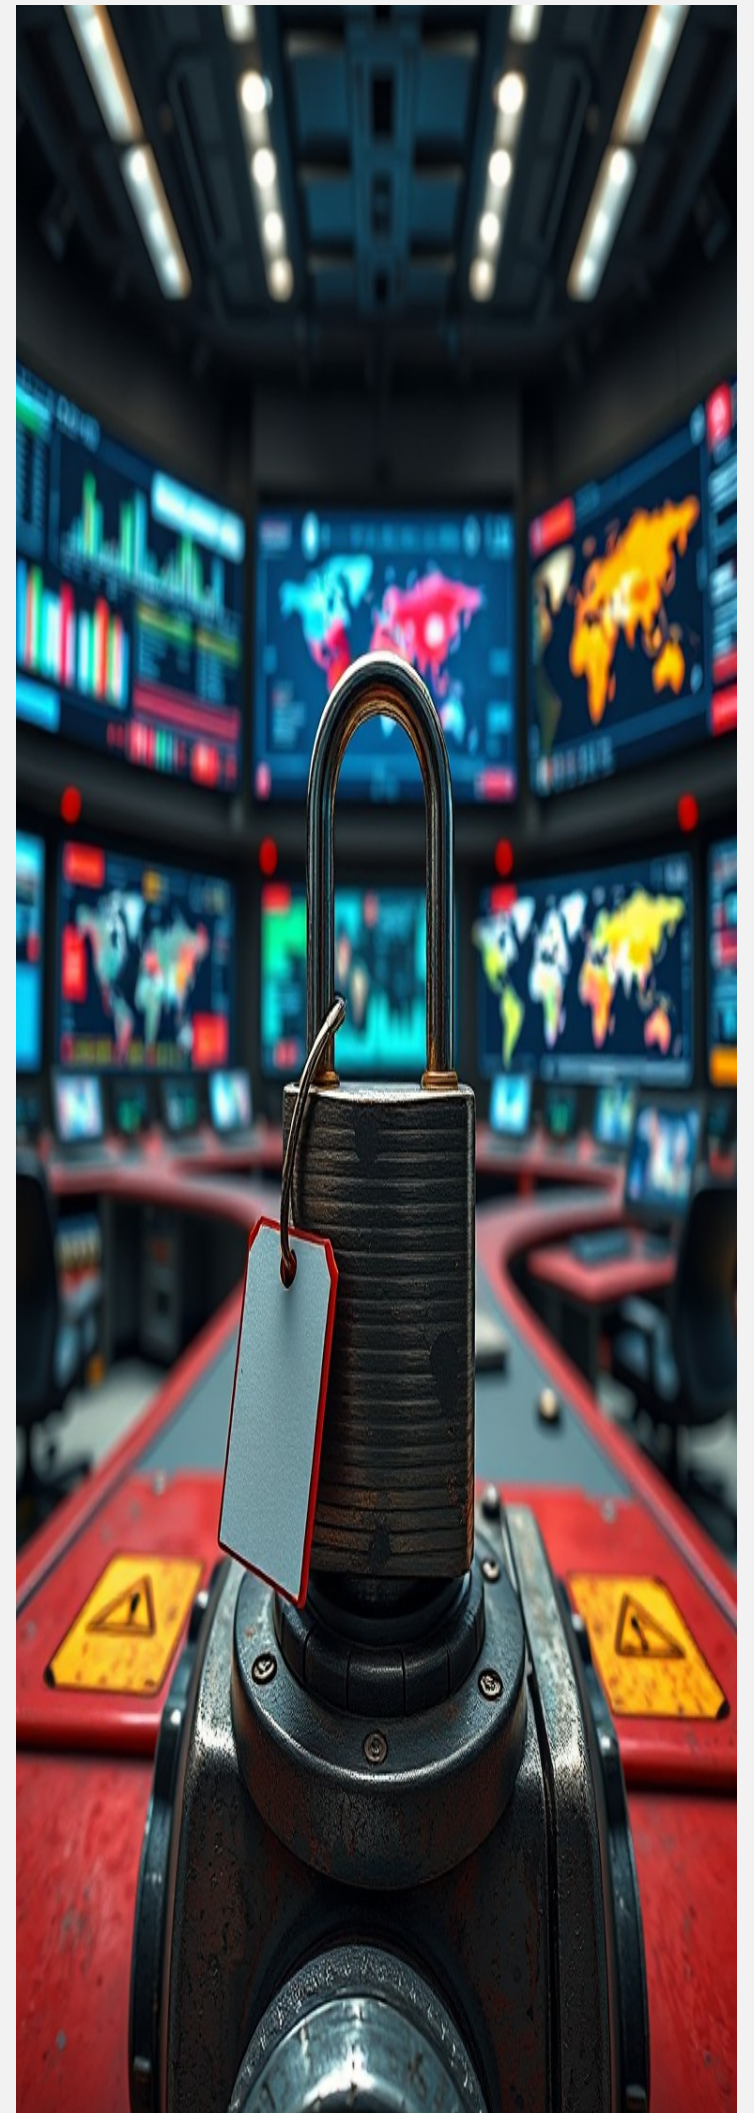

Swipe for insights →

Split

Expert Consensus

The CSET analysis reveals deep disagreement among experts about the strategic outcome of the Trump-Xi summit regarding AI governance.

This split reflects a fundamental tension in global AI policy: whether high-level diplomatic engagement can lead to binding agreements or merely serve as a delay tactic. The absence of a unified expert stance undermines the credibility of summit outcomes as genuine progress markers.

01

Diplomacy Without Accountability

Without mechanisms to verify compliance or enforce norms, even high-profile dialogues risk becoming performative. The real danger lies not in inaction, but in the illusion of progress that can delay necessary regulatory innovation.

02

The Procrastination Trap

The risk is not just delay—it's the erosion of institutional trust. If every summit ends in 'split' consensus, stakeholders may stop expecting outcomes, further weakening the incentives to act. Real safety requires not consensus, but commitment.
